INTERNATIONAL GLACIOLOGICAL SOCIETY

The Society was founded in 1936 to provide a focus for individuals interested in practical and scientific aspects of snow and ice. Membership is open to all individuals who have a scientific, practical or general interest in aspects of snow and ice study.

Papers on glaciology are printed in the *Journal of Glaciology*, which is published six times a year. The Society also publishes the *Annals of Glaciology*, a peer-reviewed, thematic journal, two to four times a year. The Society's news bulletin, *ICE*, is published three times a year.

The Society sponsors symposia, meetings and workshops in many countries throughout the year.

Journal of Glaciology publishes original articles and letters concerning scientific research into any aspect of ice and snow, and interactions between ice, snow, climate and other environmental phenomena including the biosphere and permafrost. Research techniques described in the Journal include, for example, field studies, remote sensing, computer modelling and laboratory studies. Research topics include the nature of and changes in mountain glaciers and ice sheets, including former ice sheets. For example, ice cores extracted from the glaciers and ice sheets reveal detailed information on past atmospheric composition and climate, and changes in the extent and thickness of the ice sheets are also related to climate change. The physical, chemical and crystallographic properties of ice and snow are included, especially but not only as they relate to the flow of ice and to past climate. The Journal also publishes studies of sea ice, and of icebergs, along with their interactions with climate on shorter time scales, and with the ocean. Snow and avalanche research is included in the Journal, with several recent articles investigating avalanche dynamics. Snow and ice on other planets is also within the realm of the Journal of Glaciology, as are studies of atmospheric ice.

Journal of **GLACIOLOGY**

CONTENTS Vol 65 No 252 2019

- 523 **A.N. Moyer, P.W. Nienow, N. Gourmelen, A.J. Sole, D.A. Slater, M. Truffer, M. Fahnestock**
Spatio-temporal variations in seasonal ice tongue submarine melt rate at a tidewater glacier in southwest Greenland
- 531 **Tomotaka Saruya, Koki Nakajima, Morimasa Takata, Tomoyuki Homma, Nobuhiko Azuma, Kumiko Goto-Azuma**
Effects of microparticles on deformation and microstructural evolution of fine-grained ice
- 542 **Johannes Reinthaler, Frank Paul, Hugo Delgado Granados, Andrés Rivera, Christian Huggel**
Area changes of glaciers on active volcanoes in Latin America between 1986 and 2015 observed from multi-temporal satellite imagery
- 557 **Martina Arcangioli, Angiolo Farina, Lorenzo Fusi, Giuseppe Saccomandi**
Constitutive equations with pressure-dependent rheological parameters for describing ice creep
- 565 **William Kochtitzky, Hester Jiskoot, Luke Copland, Ellyn Enderlin, Robert McNabb, Karl Kreutz, Brittany Main**
Terminus advance, kinematics and mass redistribution during eight surges of Donjek Glacier, St. Elias Range, Canada, 1935 to 2016
- 580 **David Brooking Bonan, John Erich Christian, Knut Christianson**
Influence of North Atlantic climate variability on glacier mass balance in Norway, Sweden and Svalbard
- 595 **Hannes Konrad, Anna E. Hogg, Robert Mulvaney, Robert Arthern, Rebecca J. Tuckwell, Brooke Medley, Andrew Shepherd**
Observations of surface mass balance on Pine Island Glacier, West Antarctica, and the effect of strain history in fast-flowing sections
- 605 **Sojiro Sunako, Koji Fujita, Akiko Sakai, Rijan B. Kayastha**
Mass balance of Trambau Glacier, Rolwaling region, Nepal Himalaya: in-situ observations, long-term reconstruction and mass-balance sensitivity
- 617 **Jakob F. Steiner, Pascal Buri, Evan S. Miles, Silvan Ragettli, Francesca Pellicciotti**
Supraglacial ice cliffs and ponds on debris-covered glaciers: spatio-temporal distribution and characteristics
- 633 **Yang Li, Shichang Kang, Fangping Yan, Jizu Chen, Kun Wang, Rukumesh Paudyal, Jingshi Liu, Xiang Qin, Mika Sillanpää**
Cryoconite on a glacier on the north-eastern Tibetan plateau: light-absorbing impurities, albedo and enhanced melting
- 645 **Lu Niu, Gerrit Lohmann, Sebastian Hinck, Evan J. Gowan, Uta Krebs-Kanzow**
The sensitivity of Northern Hemisphere ice sheets to atmospheric forcing during the last glacial cycle using PMIP3 models
- 662 **Peter Washam, Keith W. Nicholls, Andreas Münchow, Laurie Padman**
Summer surface melt thins Petermann Gletscher Ice Shelf by enhancing channelized basal melt
- 675 **C. Grima, I. Koch, J.S. Greenbaum, K.M. Soderlund, D.D. Blankenship, D.A. Young, D.M. Schroeder, S. Fitzsimons**
Surface and basal boundary conditions at the Southern McMurdo and Ross Ice Shelves, Antarctica
- 689 **Shin Sugiyama, Francisco J. Navarro, Takano Sawagaki, Masahiro Minowa, Takahiro Segawa, Yukihiro Onuma, Jaime Otero, Evgeny V. Vasilenko**
Subglacial water pressure and ice-speed variations at Johnsons Glacier, Livingston Island, Antarctic Peninsula
