Butterworths BASIC Books

Announcing a new title for engineers and students

BASIC Aerodynamics

C B Stribling, BSc, CEng, MRAeS

Applied Mechanics Branch, Royal Military College of Science, Shrivenham, Wiltshire

BASIC Aerodynamics introduces the reader to the fundamental calculations in aerodynamics using the BASIC programming language. Through a carefully planned series of programs the student can follow the way that the theory evolves and can then apply the theory to practical problems in aircraft design.

The book covers many of the topics in degree courses in aeronautical engineering and will help the student to achieve a fluency in programming in this field. Most, if not all, of the programs can be run on a home computer of 32K or more. Professional aeronautical engineers may well find this book a suitable basis for preliminary calculations where a main-frame computer is not available.

Contents: Introduction to BASIC • Elements of fluid mechanics • Stream function and velocity potential • Boundary layers • Aerofoil section theory • Finite wing theory • Supersonic flow • Bibliography • Index

Softcover 160 pages approx 216 × 138mm 0 408 01310 9 October 1984 £7.95

PROCEEDINGS OF THE SYMPOSIUM ORGANISED BY THE ASTRONAUTICS & GUIDED FLIGHT SECTION ON "TESTING FOR SPACE AND WEAPONS PRODUCTS" AT THE ROYAL AERONAUTICAL SOCIETY 18 JANUARY 1984.

The spectacular development in two major technology advances over the past 25 years has led to the present situation where for all major weapon and space projects, there needs to be a careful and thorough assessment of the manner in which the various requirements for engineering tests are planned and implemented. The two advances are solid state electronics culminating in the everyday use of the 'chip' and the computer which, provided with sensors and 'muscle', has broad application in the field of engineering control.

Papers presented at the Symposium related to:

- Testing Perspectives
- Testability — A Military User's Point of View
- On Target with Confidence
- Developments of Methods for Calibration and Testing Gyroscopic Instruments for GW Applications
- Developments in Test Software Philosophy and Techniques
- Mate Institutionalisation
- Communications Spacecraft Payload Testing
- System Testing for Communication Spacecraft
- Reliability Testing for GW Systems

Copies of the proceedings are available from the Society priced £15 plus £1.50 surface mail and packing.
