Cover photo. Headwaters of the Duje river at the foothills of Peña Vieja (2619 m), in the Central Massif of Picos de Europa, northern Spain. The Duje River is running behind the long moraine visible in this picture, which was originated during the last glacial maximum. The moraine is resting on top of much older Quaternary deposits (cemented calcareous breccias carved by the river) that probably accumulated during the MIS 11. For further details, see article by E. Villa et al., p. 1–5 in this issue. Photo by E. Villa.
