

injury and the family in general and reinforces the concept of brain injury being a profound life-changing experience for the family as well as for the patient. Tyerman and Barton give a community service example of working with families in Chapter 18. In Chapter 19, Daisley and Webster broach the subject of the impact of TBI on children, giving examples of relevant interventions.

Overall, *Psychological Approaches to Rehabilitation After Traumatic Brain Injury* is an excellent resource for neuropsychologists working in rehabilitation settings and with brain injury patients, as well as for other rehabilitation professionals. It is well written, easy to read, and provides many helpful suggestions and references to aid in the application

of a psychological approach to rehabilitation. Unfortunately, the book also highlights the great need for services for these patients and makes one realize that there is a serious lack of such services, at least in the United States. Nevertheless, this text encourages the development of these services by offering valuable information and ideas for treating patients who have experienced a brain injury.
