*Cover photo.* View of Shadow Bay, Lake Chaekuktuli, located in the Ahklun Mountains in southwestern Alaska. The image was taken by Scott Lamoureux early in the morning of July 31, 2006, as the clouds began to lift after an overnight rainfall. The distinctive color of the water is produced by the inflow of fine grained sediment from the catchment that results in the formation of clastic varved sediments in Shadow Bay. (See the article by Kaufman et al., pages 1–9, in this issue.)
