

Threatening or threatened?

The cheetah has been listed as 'endangered' on the I.U.C.N. Red Data List since 1976. In Southern Africa right now it is being shot as vermin in 67 magisterial districts. A paradox of tragic proportions. But what is the true situation? Are these two seemingly irreconcilable points of view actually in conflict? In order to assess this and many other apparent anomalies in the Africa of today, you need information. Objective information. By joining the Wildlife Society of Southern Africa you will receive your copy of the bi-monthly "African Wildlife". You will be given new insight into the desperate plight of the Knysna elephant. The threat to the leatherback turtle of Tongaland. Are the white lions of Timbavati really some sort of ecological "circus act"? In short, you will gain better perspective on the way in which traditional conservation policies have to adapt to modern circumstances. At the same time, you will be aiding the educational programmes which are the most effective weapons against the mindless destruction of fauna and flora. For the Wildlife Society of Southern Africa is a group of responsible, scientifically oriented people, actively engaged in a battle against the forces of unrelenting exploitation. Join us. The more members we have, the greater our voice.

African Journal of Ecology

Published for the East African Wildlife Society

African Journal of Ecology (formerly East African Wildlife Journal) was inaugurated to meet the growing need for an authoritative organ for the dissemination of the results of scientific research into East Africa's wildlife. Its scope has since been widened to include original research papers which make a significant contribution to the study of the plant and animal ecology of Africa, and comprehensive reviews and brief communications are now regular features.

Manuscripts for publication should be submitted to the Editor, Professor F.I.B. Kayanja, Department of Veterinary Anatomy and Histology, Makerere University, P.O. Box 7062, Kampala, Uganda

Subscription Information

African Journal of Ecology is published quarterly.

Subscription rates for 1984 are:

£56.00 (U.K.)

£67.00 (overseas)

\$126.00 (U.S.A. & Canada)

post free

Mazingira

GROWING AND CHANGING IN 1984

Starting with the first issue of 1984, Mazingira is changing to reflect the needs of a wider readership.

Six times a year, the new larger-format (A4) Mazingira will contain:

FORUM

A Major statement on environmental and development policy by a leader in international affairs.

FOCUS ON THE ENVIRONMENT

Major factual articles, aimed at exploring scientific, economic and social issues of importance to environmentalists and the concerned public.

CURRENT ISSUES

Short articles on matters of current environmental concern.

DIALOGUE

A lead article, covering a controversial environmental subject — editorial and readers comments on these issues.

Mazingira will also contain:

A diary of important future meetings, conferences and symposia. A listing of professional job vacancies in environment and development.

SUBSCRIPTION RATES:

1984 (6 issues) \$25/£15 Developing Countries \$15.

Please send me a free specimen copy of **Mazingira**.

Please enter..... subscription(s) to **Mazingira** for year(s). I enclose my cheque for £/\$..... All cheques should be made out to "Mazingira".

Urban Ecology

The Second European Ecological Symposium, Berlin, 8-12 September 1980

Edited by **R. Bornkamm**

Institut für Ökologie, Technische Universität Berlin

J. A. Lee

Department of Botany, University of Manchester

and **M. R. D. Seaward**

School of Studies in Environmental Science, University of Bradford

Although changes in the flora and fauna of cities have been recorded since at least the middle of the nineteenth century, few integrated attempts have been made to examine the ecological relationships between plants and animals and the urban environment. The aims of this Symposium were to bring together the limited information available, to encourage further interest and research in urban ecology, and to encourage the use of ecological inputs to the planning process.

Outline of Contents

Urban ecosystems and their constitution; Ecological effects of human activity in urban areas; The acquisition and application of ecological knowledge in the urban environment.

1982. 384 pages, 75 illustrations. £27.50

Field Guide to British Deer

Edited by F.J. Taylor Page of the British Deer Society

This popular and authoritative guide to the study of British deer has been revised and updated for this third edition. It is now published in an attractive pocket-sized format with a durable plastic cover.

From the reviews of the second edition

'The most useful book ever published on British mammals, the second edition . . . gives more original, practical information in its 83 pages of text and sketches than other books thrice the size.'

Liverpool Daily Post

'A very useful little book.'

Gamekeeper & Countryside

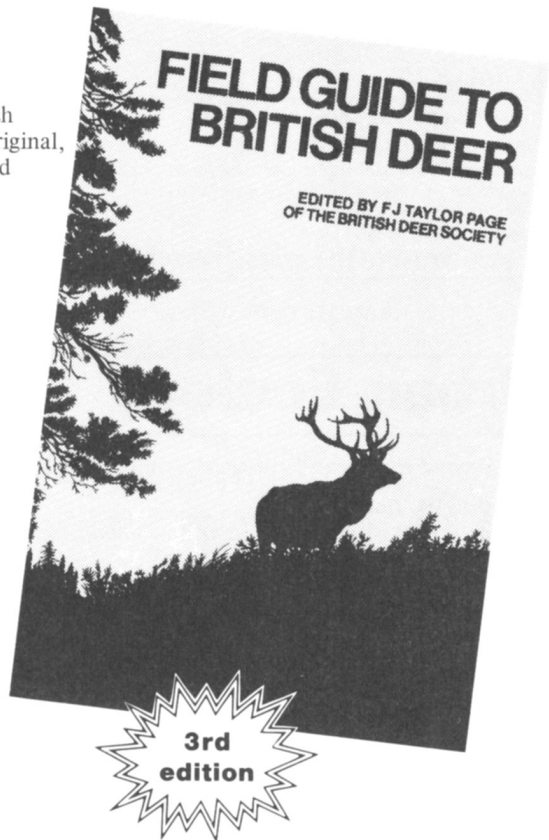

'A mine of information.'

The Naturalist

'This concise little book repays careful study from cover to cover and is by far and away the most useful and valuable publication so far produced under the auspices of the British Deer Society. . . . Anyone with the slightest interest in deer should add it to their library.'

Deer

Third Edition, 1982
96 pages, 30 illustrations
£4.95

Mammal Review

Editors

Derek Yalden PhD, *Department of Zoology, University of Manchester, Manchester M13 9PL, U.K.*

G.R. Hosey PhD, *Department of Natural & Behavioural Sciences, Bolton Institute of Higher Education, Bolton BL3 5AB, U.K.*

Mammal Review is an official publication of the Mammal Society, dedicated to the promotion of mammalian studies. It is not intended for the publication of the results of original research but rather as a secondary journal, carrying reviews of, and reports on, any aspects of mammalogy. It also serves to report the proceedings of the Society's Symposia, which again are of a review nature.

Nowadays there are relatively few people who study a taxonomic group *per se*; many more become interested in the groups through the pursuit of one of the sub-disciplines such as ecology, behaviour, anatomy, physiology, genetics, etc. The journal therefore has an interdisciplinary nature and is intended for a wide readership, both amateur and professional. Contributions which promote the dissemination of knowledge of mammals or encourage their study are invited, particularly those which describe work in progress in the various disciplines and which help to bridge interdisciplinary gaps. Reports on the status and distribution of mammalian species are also welcomed.

Some issues of *Mammal Review* are devoted to the part-work *Techniques in Mammalogy*. This is intended as an introduction and source book to a range of methods and techniques applicable to mammalogy. Topics follow a natural working sequence, and the techniques described proceed from the simple to the sophisticated and are intended to introduce the appropriate methods, explain their underlying principles and limitations and their significance in mammalian research. The complete work will eventually be available as a set of back issues of the journal.

Subscription Information

Mammal Review is published quarterly. Subscription rates for 1984 are £31.00 (U.K.), £37.00 (overseas), \$70.00 (U.S.A. & Canada) post free.
