# The Journal of Agricultural Science

## Senior Editor (Animal papers)

Julian Wiseman, *University of Nottingham, UK*

## Senior Editor (Crops & Soils papers)

Paul Bilsborrow, *Newcastle University, UK*

*The Journal of Agricultural Science* publishes papers concerned with the advance of agriculture and the use of land resources throughout the world. It publishes original scientific work related to strategic and applied studies in all aspects of agricultural science, including: crop and animal physiology, modelling of crop and animal systems, the scientific underpinning of agronomy and husbandry, engineering solutions, decision support systems, land use, environmental impacts of agriculture and forestry, impacts of climate change, rural biodiversity, experimental design and statistical analysis, the application of new analytical and study methods (including molecular studies). The journal also publishes book reviews and letters.

## BRITISH JOURNAL OF NUTRITION

### Editor-in-Chief

G C Burdge, *University of Southampton, UK*

*British Journal of Nutrition* is a leading international peer-reviewed journal covering research on human and clinical nutrition, animal nutrition and basic science as applied to nutrition. The journal recognises the multi-disciplinary nature of nutritional science and includes material from all of the specialities involved in nutrition research, including molecular and cell biology, and the emerging area of nutritional genomics.

# Experimental Agriculture

## Editor

Dave Harris, *ICRISAT, Kenya*

*Experimental Agriculture* publishes the results of original research from any source on the agronomy of field, plantation and herbage crops grown for human or animal food; for industrial purposes; and on systems of agricultural production, particularly in the warmer regions of the world. It is especially concerned with experimental work designed to explain agronomic results in biological and environmental terms. The journal publishes accounts of new experimental techniques, new methods of crop production and discusses problems in countries where production is developing rapidly. There are regular book reviews and occasional, often invited, reviews of research.

## NUTRITION RESEARCH REVIEWS

### Editor-in-Chief

Jayne V. Woodside, *Queen's University, Belfast, UK*

*Nutrition Research Reviews* offers a comprehensive overview of nutritional science today. By distilling the latest research and linking it to established practice, the journal consistently delivers the widest range of in-depth articles in the field of nutritional science and has done so for the past twenty-one years. It presents up-to-date, concise and critical reviews of key topics in nutrition science, advancing new concepts and hypotheses that encourage the exchange of fundamental ideas on nutritional well-being in both humans and animals.

## ADVANCES IN IRRIGATION AGRONOMY

Fruit Crops

M. K. V. Carr

As global pressure on water resources intensifies, it is essential that scientists understand the role that water plays in the development of crops and how such knowledge can be applied to improve water productivity. Linking crop physiology, agronomy and irrigation practices, this book focuses on eleven key fruit crops upon which millions of people in the tropics and subtropics depend for their livelihoods (avocado, cashew, Citrus spp., date palm, lychee, macadamia, mango, olive, papaya, passion fruit and pineapple). Each chapter reviews international irrigation research on an individual fruit crop, identifying opportunities for improving the effectiveness of water allocation and encouraging readers to link scientific knowledge with practical applications. Clearly written and well illustrated, this is an ideal resource for engineers, agronomists and researchers concerned with how the productivity of irrigated agriculture can be improved, in the context of climate change, and the need for growers to demonstrate good irrigation practices.

\$115 / £70: Hardback: 978-1-107-03735-9: 350 pp.

## ADVANCES IN IRRIGATION AGRONOMY

Plantation Crops

M. K. V. Carr

*With contributions by Rob Lockwood and Jerry Knox*

### *Praise for the book:*

"This book will become a major source of reference for those working on irrigated plantation crops, and it can be thoroughly recommended to readers." – *Agriculture for Development*

"An excellent publication both in terms of content and presentation... No doubt [it] will be a great help for all those researchers and practitioners involved in improving water use productivity of an important but so far somewhat neglected group of crops." – Martin Smith, *Experimental Agriculture*

"Mike Carr is to be congratulated on producing a rigorous but readable assessment of the state of knowledge of the water needs and irrigation agronomy of 10 major plantation crops. He has used his 45 years of experience and knowledge as researcher, tutor and editor to produce a valuable reference book for anyone studying irrigation agronomy or planning to conduct research on plantation crops. For the busy reader he has produced a helpful summary at the end of each section – for those needing more information the conclusions are supported by over 800 references. In a final chapter he summarizes the similarities and differences in water needs and irrigation between the 9 crops. He concludes with a plea for better reporting of research and valuably identifies the gaps in knowledge and where future research is needed." – Andrew Bennett CMG, President of the Tropical Agriculture Association (TAA), UK

\$117 / £69: Hardback: 978-1-107-01247-9: 360 pp.

# Seed Science Research

The official journal of the International Society for Seed Science (ISSS)

## Editor-in-Chief

H.W.M. Hilhorst, Wageningen University, The Netherlands

*Seed Science Research* is an international journal publishing original and opinion papers, as well as reviews. The Journal deals primarily with the fundamentals of seed research with emphasis on the physiology, biochemistry, molecular biology and ecology of seed development, dormancy and germination.

The importance of seeds to propagation, food, biofuel and biodiversity is of increasing interest and therefore submissions on seed genetics, seed biotechnology, seed treatment and seedling establishment are especially encouraged if they are novel and 'seed driven'.
