

Structure and Function of Membranes

Edited by D. H. Northcote. *British Medical Bulletin*, 24: 2, 1968. Medical Department of the British Council, London. 87 pages; tables and illustrations. 28 × 22 cm. £ 2 (\$ 6.50).

Structure and function of animal-cell membranes (P. V. Wittaker, D. H. Northcote). Immunological reactions at the cell surface (R. R. A. Coombs and P. J. Lachmann). Chemistry of membranes (G. M. W. Cook). Ultrastructure of membranes: bimolecular organization (A. D. Bangham and D. A. Haydon). Ultrastructure of membranes: micellar organization (J. A. Lucy). Insect cuticle and membranes structure (J. W. L. Beament). Effects of pharmacologically active compounds on membranes (A. C. Allison). Vacuoles, vesicles and lysosomes (J. T. Dingle). The transport of sugar (W. D. Stein). Mitochondrial transporting systems (J. B. Chappell). Membranes ATPase and cation transport (I. M. Glynn). Sarcoplasmic reticulum in vertebrate muscle (Sally Page). Membrane functioning in preparations from mammalian brain (H. McIlwain). Nervous conduction (P. F. Baker).

Computing in Medicine

Edited by C. C. Spicer, *British Medical Bulletin*, 24: 3, 1968. Medical Department of the British Council, London. 87 pages; tables and illustrations. 28 × 22 cm £ 2 (\$ 6.50).

Computer technology (L. C. Payne). Medical vocabulary and information (J. Anderson). Preparation of clinical data for computers (J. A. V. Bates). Linkage of medical records (E. D. Acheson). Disciplining of medical data (M. J. R. Healy). Computer surveillance of congenital malformations (G. B. Hill, C. C. Spicer and J. A. C. Weatherall). Computer science in the biochemistry laboratory (I. D. P. Wootton). Computer diagnosis: clinical aspects (J. A. Boyle and J. A. Anderson). Computer diagnosis: statistical aspects (J. A. Anderson and J. A. Boyle). Medical applications of taxonomic methods (D. N. Baron and P. M. Fraser). A brief note on computer

applications in radiotherapy (E. W. Emery). Computers in radiobiology (E. W. Emery). Computer simulation of respiratory physiology (E. J. M. Campbell and C. M. E. Matthews). Computing techniques in neurological diagnosis (A. M. Halliday). Automatic chromosome analysis (D. Rutovitz).

New Aspects of Human Genetics

Edited by C. E. Ford and H. Harris. *British Medical Bulletin*, 25: 1, 1969. Medical Department of the British Council, London. 118 pages; tables and illustrations. 28 × 22 cm. £ 2 (\$ 6.50).

Enzyme and protein polymorphism (H. Harris). Variations in structure of human haemoglobin (H. Lehmann and R. W. Carrell). Genetics of the thalassaemias (D. J. Weatherall). Aspects of human blood-group specificity (W. T. J. Morgan and W. M. Watkins). Inborn errors of amino-acid metabolism (C. R. Scriver). Homocystinuria (D. C. Cusworth and C. E. Dent). The porphyrias (G. Dean). Genetics of common disorders (C. O. Carter). Familial predisposition in man (J. H. Edwards). Progress in mapping human autosomes (J. H. Renwick). Human population cytogenetics (W. M. Court Brown and P. G. Smith). Autosomal imbalance and its syndromes, excluding Down's (P. E. Polani). Structural abnormalities of the sex chromosomes (P. A. Jacobs). Xg and sex-chromosome abnormalities (R. R. Race and R. Sanger). Mosaics and chimaeras (C. E. Ford). Reciprocal translocations (C. E. Ford and H. M. Clegg).

You are Extraordinary

By Roger J. Williams. Random House - New York, 1967. 15 × 21 cm bound volume with jacket; XVI + 252 pages with a number of black-and-white drawings. US \$ 5.95.

Human individuality is described and stressed in a clear and pleasant, non-technical way. One's body his highly distinctive in every detail, with special respect to the nervous system and

the « thinking apparatus ». Any human being is therefore « extraordinary », and as such he should be understood, in order for him to contribute to Society the best he can, as a result of Society providing to him the fittest conditions of life and expression as an individual, rather than a statistical unit.

Endocrinopatile Genetics
(*Genetic Endocrinopathies*)

By C. Maximilian, St. M. Milcu, B. Ionescu.
Editura Academiei Republicii Socialiste Romania.
Bucuresti 1968. 480 pages; 111 black-and-white

illustrations. English and Russian Summaries.
Bound volume with cover. 17 × 24 cm. 35 Lei
(\$ 6.00 approx).

Genética Clasica y Molecular
(*Classic and Molecular Genetics*)

By Carsten Bresch. Translated from German into Spanish by Arturo Gullon. Ediciones Rialp, S.A., Madrid - Mexico - Buenos Aires - Pamplona, 1966 Series: Manuales de la Biblioteca del Pensamiento Actual. Bound volume with jacket; 15×21 cm; 550 pages, numerous tables and black-and-white illustrations. Price not indicated.
