invite your enquiries concerning  
projects to which our  
comprehensive engineering  
facilities can usefully  
be applied*

In this aircraft, described as the ultimate in subsonic speed combined with the best possible operating economy, the entire electrical generating capacity is dependent upon its constant speed drives, so that reliability and a long life between overhauls are of vital importance. Designed specifically for civil aircraft duties, HOBSON Constant Speed Alternator Drives achieve these essential qualities by their novel construction permitting the use of a transmission oil pressure of only 500 p.s.i. In addition, a unique pump off-loading system reduces the pump transmission pressure to 50 p.s.i. when the aircraft is cruising. The ingenuity and reliability inherent in this design also characterise the following additional HOBSON equipment now specified for the same aircraft:— FUEL BOOSTER PUMPS  
FUEL FLOW PROPORTIONERS · TRAILING EDGE FLAP  
OPERATING SYSTEMS · LEADING EDGE DROOP OPERATING SYSTEMS
