### Southern Ocean Cephalopod Life Cycles, Populations Symposium. *Antarctic Science* Special Issue

Around 70 delegates from 15 countries attended the five-day symposium held in Cambridge on 5–10 July. The symposium, organized by Dr Paul Rodhouse of British Antarctic Survey was the first international meeting on cephalopod research, allowing fruitful exchange of ideas about these little known species. A selection of papers from the symposium will be published next June as a special issue of *Antarctic Science*. The issue will be edited by Dr P. Rodhouse, Dr C.C. Lu & Dr U. Piatkowski.

### Restructuring of British logistics

British Antarctic Survey recently announced that there would be major changes in their Antarctic stations. From April 1996 Faraday Station will be temporarily closed pending a review of its future use, whilst Signy Station will be converted from a year-round station with a capacity for up to 27 people to a much smaller summer-only station. To replace the research capacity lost it is intended that some science programmes from Faraday will be transferred to Halley or Rothera, whilst for biology a new building will be constructed at Rothera to support year-round marine and terrestrial biology. The feasibility of automating some measurements at Faraday is also under investigation.
