Central Asia, East Asia*

Quaternary Research is the research journal for the American Quaternary Association

Cover photo. A Bactrian camel guards a cold-based glacier on the east face of Sutai Uul, a 4090-m peak in the southern Mongol Altai mountains. The glacial chronology in Mongolia appears to be distinctly different from that in western Central Asia and Siberia where the local last glacial maximum predated marine oxygen isotope stage 2. The camel stands on a latest-Pleistocene moraine at 3400 m altitude. (See related article by Gillespie et al., pages 169–187, in this issue. Photograph by D.H. Clark, July 1998.)
