NOTES FOR AUTHORS

Papers to be considered for publication should be sent to the Editorial Secretary, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

In view of the high cost of publication, authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate and preferably should be typewritten on one side of A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. For style of references at end of text, see recent issues of *Proceedings A*.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t., a.e., \forall , \exists , and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Horizontal fraction signs should normally be avoided: use either solidus signs / or negative exponents. Replace $e^{(\dots)}$ by $\exp[...]$ if the expression in parenthesis is complicated. Simple formulae should *not* be displayed unless they require a formula number. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{}$ or the exponent 1/2 for the square root. Sub-subscripts and super-superscripts should be avoided if possible: bars and other devices over indices cannot be supplied.

Note that confusion very often arises between 1 (one) and l (ell); 0 (zero) and O (Capital oh); \circ (composition) and o (lower case oh); x and \times ; U and \cup ; c and \subset ; \in (belongs to) and ϵ (epsilon); \emptyset (empty set) and ϕ (phi); $_1$ and comma ,; prime ' and 1 ; K and κ ; p and ρ ; w and ω ; \sum (summation) and Σ (capital sigma); \prod (product) and Π (capital pi); v (lower case vee) and ν (Greek nu); a (lower case a) and α (Greek alpha); y (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent* of the printers' charge for the setting of a particular paper *will be charged to the author*.

Parts 3/4

CONTENTS

C. M. DAFERMOS	
Regularity and large time behaviour of solutions of a conservation law without convexity	201
TH. KAPPELER	
Positive perturbations of self-adjoint Schrödinger operators	241
HAROLD SIMMONS	
Sheaf representations of strongly harmonic rings	249
PETER W. BATES	
Travelling waves in radially symmetric parabolic systems	269
PETER ROWLINSON	
Certain 3-decompositions of complete graphs, with an application to finite fields	277
ALAN WEINSTEIN	
A global invertibility theorem for manifolds with boundary	283
R. LEIS and G. F. ROACH	
A transmission problem for the plate equation	285
P. M. EDWARDS	
Fundamental semigroups	313
P. GRINDROD and B. D. SLEEMAN	
Homoclinic solutions for coupled systems of differential equations	319
K. WŁODARCZYK	
Bernstein's theorem for polynomial maps of complex topological vector spaces	329
A. CAPOZZI and A. SALVATORE	
Nonlinear problems with strong resonance at infinity: an abstract theorem and applications	333
W. LAMB	
A distributional theory of fractional calculus	347
VITTORIO CAFAGNA and FLAVIO DONATI	
On the sign of the solutions to some semilinear Dirichlet problems	359
DAVID W. REYNOLDS	
On the linearised theory of buckling for a compressed viscoelastic rod	371
W. D. MUNN	
The algebra of a commutative semigroup over a commutative ring with unity	387
THIERRY GALLOUËT and JEAN-MICHEL MOREL	
Corrigenda: Resolution of a semilinear equation in L^1	399
INDEX	v
