Cover photo. The Czarny Staw pod Rysami glacial lake in the Polish High Tatra Mountains. The lake is 76.4m deep located in over-deepened glacial cirque in the upper part of the Rybi Potok Valley. This northwest-facing cirque is one of the deepest in the whole massif. During the last glacial cycle this area was filled with ice, which was a part of the very large dendritic (over 40 sq km) system of glaciers supplying the Biala Woda glacier. Photo by Michal Makos.
