

## Addendum

---

'Dynamics of the seedling shadow of a frugivore-dispersed tree species in French Guiana'. Forget, P.-M. & Sabatier, D., *Journal of Tropical Ecology* 13(5): 767–773, 1997.

This paper showed the characteristics of a primate-generated seedling shadow of an unnamed frugivore-dispersed tree species (*Virola* sp.) in French Guiana. The species has recently been described as a new taxon (Sabatier 1997) and is now known by the binomial *Virola kwatae* Sabatier. The specific name of the tree refers to the vernacular name of the spider monkey (*Ateles paniscus*) which is its main seed disperser in French Guiana.
