The European portal [www.psychiatrynet.eu](http://www.psychiatrynet.eu) offers a selection of high quality links for the practising psychiatrist, but also for researchers in psychiatry. The editorial board has selected websites for 16 categories of psychiatric disorders, following the DSM system. There are also links related to treatment, specific areas of interest and more general categories.

For example, if you are looking for guidelines for the treatment of schizophrenia, you will find a brief (3-6 lines) description of the NICE and APA guidelines and a link to these guidelines (in PDF) in the category psychotic disorders. You can search on a wide variety of relevant and checked information, like what are the international organisations on eating disorders or on specific substance abuse. If you want to know the names of the members of the DSM-V workgroups or the journal impact factors 2007, you can find it under general categories or by using the search function of [www.psychiatrynet.eu](http://www.psychiatrynet.eu).
