

Klan, or any of the hundred-and-one terrorist organizations that threaten to rip the fabric of civilized society apart, any assassin, that is, could enter this defence if he sincerely believed in the rightness of his cause. This is a monstrous proposition and it is no consolation for me that Dr Moran assures us that, "Much like the insanity defence, a political defence would be affirmed and accepted only rarely". I would point out that in this country at least, the disposal of mentally disordered offenders under Part V of the 1959 Mental Health Act is by no means rare.

And, by the way, should this book run to a second edition, the publishers would be well advised to correct the claim made on page 53 that it was Nelson who was the victor of Waterloo. Such monumental clangers do tend to cast doubts on the scholarship of an author.

HENRY R. ROLLIN, *Librarian,*
Royal College of Psychiatrists, London

¹ Dr Moran has discovered a decipherable signature that would appear to settle the controversy surrounding the spelling of McNaughtan's name.

² ROLLIN, HENRY R. (1977) *McNaughton's Madness*. In *Daniel McNaughton: His Trial and the Aftermath* (eds. D. J. West and A. Walk). Gaskell. The Royal College of Psychiatrists. Ashford, Kent: Headley Brothers.

Psychology and Psychiatry. 5th edition. Edited by P. DALLY. London: Hodder and Stoughton. 1981. Pp 285. £4.75.

This is the fifth edition of a book first published 16 years ago. Although primarily intended for nurses it can be usefully read by social workers, psychologists and other workers in the caring professions. The book is written in an interesting and stimulating manner and is full of useful practical clinical advice based on the author's experience.

Part one of the book deals with psychology and presents succinctly and comprehensively aspects of psychology relevant to clinical practice and includes general concepts of evolution and adaptation, intelligence, personality, development, as well as consciousness, sleep and the neurophysiological basis of mental functioning and behaviour. The remainder of the book deals with psychiatry and describes all the major mental disorders clearly and concisely. A new chapter has been added on psychiatric emergencies which will be of value to anyone dealing with psychiatric patients, and also a special discussion on the nurse/patient relationship and the nursing of psychiatric patients. Finally relevant medico-legal provisions for the care of psychiatric patients are described.

The book can be strongly recommended for nurses and paramedical workers of various kinds. It will also be a valuable book for general practitioners.

LINFORD REES, *Emeritus Professor of Psychiatry,*
University of London, Medical Director Charter Clinic

Post-Traumatic Neurosis: From Railway Spine to the Whiplash. By M. R. TRIMBLE. Chichester, W. Sussex: John Wiley. Pp 156. £13.60.

In 1882 Professor John Erichsen published his views about clinical and medico-legal aspects of "railway spine". Dr Herbert Page, Surgeon to the London and North-West Railway, refuted them in his own book in which he analysed the relationship between railway accidents and the physical and emotional sequelae of them. Erichsen believed that the accidents caused injury to the spinal cord by the mechanism of concussion and that this led to a wide variety of physical and emotional symptoms, although he had no direct evidence to support his thesis. Dr Page was more thorough in his research and in 1885 he wrote that, "nervous shock in its varied manifestations is so common after railway collisions, and the symptoms thereof play so prominent a part in all cases which become the subject of medico-legal enquiry, whether they be real or feigned, we are almost sure to meet with the symptoms of it associated with pains and points of tenderness along the vertebral spinal processes . . . we cannot help thinking that it is this combination of the symptoms of general nervous prostration, or shock, and pains in the back . . . which has laid the foundation of the views—erroneous views as we hold them to be—so largely entertained of the nature of these common injuries of the back received in railway collisions".

Expanding upon the work of Page and Erichsen, Michael Trimble writes in a fascinating way about the evolution of medical and legal opinions concerning the nature of the wide range of mental and physical symptoms that follow accidents or war experiences which, though trivial in terms of the bodily damage they cause, if indeed they cause any at all, produce chronic disability.

The book contains many anecdotes and short case histories which illustrate his discussion of the nature of functional disorders, malingering and battle neurosis. The role of pre-traumatic personality characteristics is assessed and Dr Trimble concludes that although those with neurotic character traits are more likely to develop symptoms of post-traumatic neurosis, individuals with very stable personalities who seem ill-equipped to deal with sudden, severe incidents which are potentially life-threatening, are also liable to develop an accident neurosis. The
