

## Corrigendum

Smith SM, Stinson FS, Dawson DA, Goldstein R, Huang B, Grant BF (2006). Race/ethnic differences in the prevalence and co-occurrence of substance use disorders and independent mood and anxiety disorders: results from the National Epidemiologic Survey on Alcohol and Related Conditions. *Psychological Medicine* 36, 987–998.

The *p* values for some of the race-ethnic comparisons in Table 2 were calculated using bivariate odds ratios. This method may not yield the same results as a Z test, which was specified in the Method section. A new version of the table with Z test comparisons is reproduced below.

Table 2. *Twelve-month prevalence of substance use disorders, mood disorders, and anxiety disorders by race or ethnic group*
