Perioperative Behaviour: Is there a Lunar Influence?

Linda Anne Hodge, Alfred Philip James Lake
*Alexandra Dental Centre, Royal Alexandra Hospital,
Rhyl, Denbighshire, UK*

The typesetter and the publisher would offer their sincere apologies to the authors and readers for the omission of the following corrections to the above article which appeared in *British Journal of Anaesthetic and Recovery Nursing*, 8(3).

1. Authors should have appeared in the following order
“Linda Anne Hodge and Alfred Philip James Lake”.

2. The following reference, which appears in paragraph 1 of the results section was omitted from the reference list: Lake APJ, Hodge LA. An observational study of perioperative behaviour. Is there a lunar influence? *Today's Anaesthetist* 2006; 21: 80–85.
3. The first sentence of the conclusion should have read: “As it is generally accepted that lunar effects are relatively weak we should not be surprised that, despite the relatively large sample size, the study failed to demonstrate a lunar influence on behavioural and other variables associated with anaesthesia care and the recovery process but much valuable data was record which will inform the future management service”.
