This journal is concerned with the interdisciplinary study of cybernetics and systems in the widest sense. Among the extensive range of topics covered are the following: *Artificial Intelligence, Automation, Cybernetic Modelling, Computer Simulation, Biocybernetics, Economic and Social Systems, Nature and Validation of General Systems, Ecosystems, Adaptive Systems, Philosophy of Cybernetics, the Interrelation between Cybernetics and other Sciences.*

**Kybernetes**, now in its twenty second year of publication, aims to endow cybernetics and general systems with an authoritative voice of its own and to establish a competent forum for the exchange of knowledge and information in relevant fields. One of the primary objectives of this publication is to weed out pseudo-cybernetics claims and to base cybernetics on a sound foundation; hence, highly speculative papers that lie on the fringe of cybernetics and systems sciences will not be published. The journal contains only *original papers*; it is the official publication of the World Organisation of General Systems and Cybernetics.
