

Review Papers for the Journal of Applied Probability

The Editorial Board would like to encourage the submission to the *Journal* of Review Papers summarising and coordinating recent results in any of the fields of Applied Probability. The papers should be approximately 40–50 printed pages in length.

On acceptance of a Review Paper for publication in the *Journal*, the author will receive £stg 100 (\$280). The paper will then be distributed as a book in paperback form in the following series.

Methuen's Supplementary Review Series in Applied Probability

General Editor: M. S. BARTLETT, M.A., D.SC., F.R.S.

Editor: J. GANI, D.I.C., PH.D.

This supplementary series consists of the Review Papers from the *Journal of Applied Probability* in book form. The Review Series is designed to bridge the gap between the publication of research papers and the advent of a book coordinating their results. Consecutive volumes written in a simple expository style, will provide research workers and students of Applied Probability with up-to-date accounts of work done in their fields. The series deals with the applications of Probability Theory to the biological, physical, social and technological sciences.

Already Published

- Volume 1. TIME-DEPENDENT RESULTS IN STORAGE THEORY
by N. U. Prabhu
- Volume 2. DIFFUSION MODELS IN POPULATION GENETICS
by M. Kimura
- Volume 3. GROUP REPRESENTATIONS AND APPLIED PROBABILITY
by E. J. Hannan
- Volume 4. STOCHASTIC MODELS FOR BACTERIOPHAGE by J. Gani
- Volume 5. RECENT RESULTS IN INFORMATION THEORY by S. Kotz.

In Press

Volume 6. ON THE ALGEBRA OF QUEUES by J. F. C. Kingman.

Orders for these should be made through your bookseller or direct from:
Methuen & Co. Ltd.

11 NEW FETTER LANE LONDON EC4

Subscription rates

Subscriptions (post free) for the annual volume of the *Journal* are:

U.S. \$15, £stg. 5.5.0, \$ A. 13.40, for libraries and institutions;

U.S. \$8, £stg. 2.16.0, \$ A. 7.20, for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

All enquiries about the *Journal*, as well as other subscriptions and orders for back numbers should be sent to the Editor-in-Chief. The price of back numbers is \$ 16.90, £ stg. 5.18.0, \$ A. 15.10 per volume. Cheques, money orders, etc. should be made out to the *Journal of Applied Probability*; cheques on U.S., U.K. and Australian banks will be acceptable.

Notes for Contributors

It is a condition of publication in the *Journal of Applied Probability* that papers shall not previously have appeared elsewhere, and will not be reprinted without the written permission of the Trust. The copyright of all published papers shall be vested in the Trust. It is the general policy of the *Journal* not to accept for publication papers which cannot appear in print within 15 months of their date of submission. Authors will receive 100 reprints of their papers free, and joint authors 50 each, except for authors of review papers, who will receive 10 copies free. Additional reprints will be provided at cost.

Manuscripts should be written in English or French; manuscripts in other languages may be accepted by the Editors, but will appear (subject to the author's agreement) in English or French translation in the *Journal*.

It will be of help to the Editors if the following conventions are adopted:

a) The manuscript should be typewritten, using double spacing, on one side of the paper only. The original and a copy, may be submitted to any Editor; a duplicate of the covering letter should, however, be sent to the Editor-in-Chief.

b) References should be indicated in the text by the name of the author(s) and the date, thus: Feller (1961), and the full references listed at the end of the article in alphabetical order. Journal references should include the title of the article cited, the title of the journal (abbreviated in the style of the *International Journal of Abstracts: Statistical Theory and Method*) the volume, and inclusive page numbers. Book references should give the full title, the publisher, and the place of publication. For example:

Feller, W. (1961) A simple proof for renewal theorems. *Comm. Pure Appl. Math.* **14**, 285–293.

Robinson, E. A. (1959) *An Introduction to Infinitely Many Variates*. Griffin, London.

c) Type faces should be carefully distinguished on the manuscript using the following standard methods of marking:

Italic capitals (*T, I, R*) and lower case letters (*t, i, r*) should be underlined once, e.g., T, I, R, t, i, r.

Bold-face capitals (**T, I, R**) and lower-case letters (**t, i, r**) should have a curly underline, e.g. T, I, R, t, i, r.

Greek characters (α, β, ϕ) and script letters ($\mathcal{J}, \mathcal{I}, \mathcal{R}$) should be carefully drawn and identified when first used by a marginal note of the form ' α —lower case Greek alpha' or ' \mathcal{R} —script R'.

d) Indices and subscripts should be clearly distinguished, using the marking $\overset{4}{\smile}$, $\underset{4}{\smile}$ where necessary.

Authors will receive only first proofs for correction; charges will be made for excessive alteration to these.

Printed in Israel at the Jerusalem Academic Press, 40 Agrippas Road, Jerusalem.

Journal of Applied Probability

Volume 3

Number 2

December 1966

Review Paper

- J. F. C. KINGMAN 285 On the algebra of queues

Research Papers

- CHARLES J. MODE 327 A stochastic calculus and its application to some fundamental theorems of natural selection
- R. G. KHAZANIE AND H. E. McKEAN 353 A Mendelian Markov process with multinomial transition probabilities
- MARVIN A. KASTENBAUM 365 A dialysis system with one absorbing and one semi-reflecting state.
- KLAUS DIETZ 375 On the model of Weiss for the spread of epidemics by carriers
- HOWARD WEINER 383 On age dependent branching processes
- E. SENETA AND D. VERE-JONES 403 On quasi-stationary distributions in Markov chains with a denumerable infinity of states
- JOHN N. DARROCH 435 Identities for passage times with applications to recurrent events and homogeneous differential functions
- S. GALLOT 445 Asymptotic absorption probabilities for a Poisson process
- P. A. P. MORAN 453 A note on recent research in geometrical probability
- M. F. JAMES 464 On the conditional expected value of contributions from a renewal process
- MORRIS L. EATON 481 Characterization of distributions by the identical distribution of linear forms
- RODRIGO A. RESTREPO 495 A combinatorial method for a class of matrix games
- J. H. JENKINS 512 Stationary joint distributions arising in the analysis of the $M/G/1$ queue by the method of the imbedded Markov chain
- JON FOLKMAN AND SIDNEY PORT 521 Optimal procedures for stochastically failing equipment
- J. A. BATHER 538 A continuous time inventory model

Short Communications

- GEDALIA AILAM 550 Moments of coverage and coverage spaces
- S. GALLOT 556 A bound for the maximum of a number of random variables
- R. R. A. MORTON 559 The expected number and angle of intersections between random curves in a plane
