Emergency cardiac care has never been addressed so carefully.

It takes an innovative product to set new standards in prehospital cardiac care, and Marquette's Responder™ 1500 is doing just that.

The Responder 1500 is available as a standard ALS defibrillator/monitor offering—among many other additional features—full energy selection, synchronized cardioversion and "hands-free" defibrillation. All this in one ergonomically designed, rugged package.

But there's more. Optional features include a noninvasive external pacemaker, digital full-disclosure

ECG recording and computerized 12-lead ECG analysis. Marquette's 12-lead ECG analysis program is already playing a vital role in selecting patients for thrombolytic therapy.

The Responder 1500 also features custom user setup, so it can be re-configured in several

alternative operating modes. One of these is an automatic advisory mode for use by operators with lower skill levels.

And like all Marquette prehospital defibrillators, the Responder 1500 is fully compatible with EDIC™, a computerized ECG management system for centralized data collection and comprehensive code/QA reports.

To find out more about the Responder 1500, please call us at 1-800-558-5120, ext. 3000.

Design Your Own Backboard

With The FERNO Spine Immobilization System,
...The Choices Are Yours At An Affordable Price

- Choose either premium wood, high density phenolic wood or a plastic board in a variety of colors as shown below.

- Choose the number of CID slots.

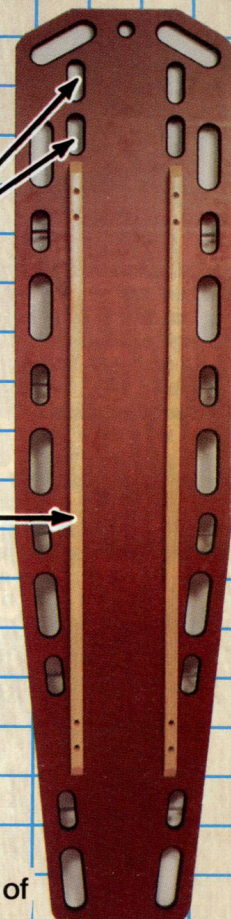

- Choose the shape you want ...tapered, rectangular or chamfered rectangular.

- Decide whether or not to have runners or protective T-molding.

- Choose widths of 16" or 18" with the number of handholds as an option.

- Choose to have x-ray translucent speed clip pins in the handholds or in separate pin slots.

- You also have the option of ordering restraints, head immobilizers, and cervical collars.

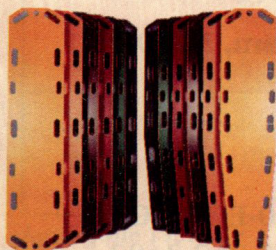

Nobody knows better than people in the field what they need in backboard design. That's why with Ferno backboards the design is up to you! Ferno meets your unique requirements with a high quality backboard at an affordable price.

Phenolic Boards

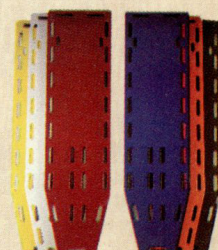

Call 1-800-73-FERNO or your authorized Ferno-Washington distributor.

FirstTemp[®] Genius.[®] Just Can't Measure

If you think all tympanic thermometers are as good as the FirstTemp *Genius*, think again.

FirstTemp is the first name in clinical tympanic thermometry. After all, we invented this technology over 10 years ago.

So it's really no surprise that while the imitators try to steal the spotlight, FirstTemp thermometers continue to take *over half a million fast, accurate temps every single day!*

"PEAK SELECT" ACCURACY

The FirstTemp *Genius* is easy to use and gentle on patients of all ages. So you'll never need to yank your patient's ear into place.

Or force the probe dangerously deep into the ear canal.

But *Genius* is more than just gentle. Since 1987, medical studies have confirmed the accuracy and reliability of FirstTemp clinical temperatures.

Now *Genius* goes even further. Our exclusive "Peak Select System[™]" records and analyzes 32 separate measurements in under two seconds, picking the most accurate reading possible.

With *Genius* you'll get a truly meaningful temp, computed and displayed in your choice of rectal, oral or core equivalence.

Because Imitators Up To The Original.

LOADED WITH OPTIONS

The FirstTemp *Genius* gives you the flexibility to switch from Fahrenheit to Centigrade whenever you like. Or press a button and use the *Genius* to scan surface temperatures.

Durable and dependable, *Genius* is simply constructed with no moving parts to wear out prematurely. In fact, the only thing you'll ever need to replace is the 9-volt battery.

And *Genius* is backed by a full three-year warranty. Which means you'll always have a *Genius* available when you need it.

LONG LIVE THE KING

Don't be fooled by tympanic imitators when you can have the one and only FirstTemp *Genius*.

To try *Genius* with no obligation, call (800) 535-5158 today.
