

## SUBSCRIPTION RATES

Subscription rates (post free) for volume 37 (2000) of the *Journal of Applied Probability* are as follows:

US\$238.50; \$A376.35; £145.50 for libraries and institutions;

US\$79.50; \$A125.45; £48.50 for individuals belonging to a recognised scientific society.

Members of the London Mathematical Society should apply direct to the Secretary of the Society for copies of the *Journal*.

Please send all enquiries to: Applied Probability, School of Mathematics and Statistics, The University, Sheffield S3 7RH, UK.

We can provide back issue prices on application. Cheques, money orders, etc. should be made out to APPLIED PROBABILITY. Payment is accepted in US, UK or Australian currency or by VISA or Mastercard (phone: +44 114 222 3922; fax: +44 114 272 9782).

## NOTES FOR CONTRIBUTORS

Papers published in the *Journal* are of two kinds:

(1) *research papers* not exceeding 20 printed pages;

(2) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress.

*Review papers, longer research papers* and *letters to the editor* are published in *Advances in Applied Probability*, a companion journal. (Note: Letters relating specifically to papers which have appeared in the *Journal of Applied Probability* will continue to appear in the *Journal*.)

The editors may publish accepted papers in either journal, according to the space available, in order to meet the 15-month deadline in publication referred to below.

### Submission of papers

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Papers will not be reprinted without the written permission of the Trust. It is the policy not to accept for publication papers which cannot appear in print within 15 months of the date of receipt of the final version. Fifty reprints of each paper will be provided free; additional reprints are available at cost.

Papers should be written in English or French; papers in other languages may be accepted by the editors, but will appear (subject to the author's agreement) in English or French translation. Please supply *three* double-spaced hard copies, at least one of which should be printed on one side of the paper only. The paper should include: (1) a short abstract of approximately 4–10 lines giving a non-mathematical description of the subject matter and results; (2) list of keywords detailing the contents for the purpose of computerised information retrieval; (3) primary and secondary classifications according to the 1991 Mathematics Subject Classification, to be found in the 1990 Annual Index of *Mathematical Reviews*.

Authors are advised to consult *The Author's Guide to the Applied Probability Journals* when preparing papers for submission. A copy of this guide may be obtained free of charge from the Applied Probability Office. An updated version of the guide, with LATEX style files, can be obtained in electronic form on <http://www.shef.ac.uk/~apt> or on PC-compatible disk from the Applied Probability Office.

For efficiency in processing, authors are requested to send all submissions to the Applied Probability Office in Sheffield, rather than to individual editors. The address for all submissions is:

**Executive Editor, Applied Probability, School of Mathematics and Statistics,  
The University, Sheffield S3 7RH, UK.**

## COPYRIGHT

The copyright of all published papers shall be vested in the Trust. When a paper is accepted for publication, the Trust requests the author(s) to sign a form assigning copyright to the Trust. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$00.70 per copy, plus .20 per page is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021-9002/00 \$00.70 + .20.

*Research Papers*

- 1 PETER JAGERS AND SERIK SAGITOV. The growth of general population-size-dependent branching processes year by year
- 15 OLIVIER FRANÇOIS. Geometric inequalities for the eigenvalues of concentrated Markov chains
- 29 SEOKHOON YUN. The distributions of cluster functionals of extreme events in a  $d$ th-order Markov chain
- 45 N. M. VAN DIJK AND H. KOREZLIOGLU. Sensitivity analysis for Markov reward structures until entrance times
- 64 ROBERT KÜHNE AND LUDGER RÜSCHENDORF. Optimal stopping with discount and observation costs
- 73 PAUL EMBRECHTS AND HARRO WALK. Recursive estimation of distributional fix-points
- 88 ANDREW L. RUKHIN. Approximate entropy for testing randomness
- 101 TORHEL ERHARDSSON. Compound Poisson approximation for the Johnson–Mehl model
- 118 RAÚL GOUET, F. JAVIER LÓPEZ AND GERARDO SANZ. Estimation of critical values in interacting particle systems
- 126 SID BROWNE. Stochastic differential portfolio games
- 148 MORIHIRO NOTOHARA. A perturbation method for the structured coalescent with strong migration
- 168 M. COTTRELL AND T. S. TUROVA. Use of an hourglass model in neuronal coding
- 187 TERJE AVEN AND UWE JENSEN. A general minimal repair model
- 198 CARL GRAHAM. Chaoticity on path space for a queueing network with selection of the shortest queue among several
- 212 STEPHEN R. E. TURNER. A join the shorter queue model in heavy traffic
- 224 LÁSZLÓ GYÖRFI, ANDRÁS RÁCZ, KEN DUFFY, JOHN T. LEWIS AND FERGAL TOOMEY. Distribution-free confidence intervals for measurement of effective bandwidth

*Short Communications*

- 236 ROBERT J. ADLER AND SRIKANTH K. IYER. An exponential change of measure for the Feller diffusion and some implications for superprocesses
- 246 S. BALAJI AND S. RAMASUBRAMANIAN. Passage time moments for multidimensional diffusions
- 252 WEI-BIN CHANG AND JOHN A. GUBNER. Poisson limits and nonparametric estimation for pairwise interaction point processes
- 261 YU HAYAKAWA. A new characterisation property of mixed Poisson processes via Berman's theorem
- 269 DIDIER PIAU. Quasi-renewal estimates
- 276 TUHAO CHEN AND E. SENETA. A refinement of multivariate Bonferroni-type inequalities
- 283 JUN CAI AND VLADIMIR KALASHNIKOV. NWU property of a class of random sums
- 290 F. SIMONOT. Moments based approximation for the stationary distribution of a random walk in  $Z_+$  with an application to the  $M/GI/1/n$  queueing system
- 300 MARK E. LEWIS AND MARTIN L. PUTERMAN. A note on bias optimality in controlled queueing systems
- 306 SHUNLONG LUO. Probabilistic aspects of  $SU(2)$ -harmonic oscillator
