June 1966

The Journal of General Microbiology

Editors: B. C. J. G. KNIGHT and A. F. B. STANDFAST

Contents of Volume 43, No. 3, June 1966

- T. Iino and M. Enomoto.** Genetical studies of non-flagellate mutants of salmonella.
- R. E. Gordon.** Some strains in search of a genus—*Corynebacterium*, *Mycobacterium*, *Nocardia* or what?
- J. H. B. Christian and J. A. Waltho.** Water relations of *Salmonella oranienburg*; stimulation of respiration by amino acids.
- S. Baumberg.** A quantitative study of the expression of unselected lactose and proline markers in *Escherichia coli* κ -12 recombinants and in the parent strains.
- A. Sanfilippo, E. Morvillo and M. Ghione.** Activity of distamycin A on the induction of adaptive enzymes in *Escherichia coli*.
- J. M. N. Willers and M. F. Michel.** Immunochemistry of the type antigens of *Streptococcus faecalis*.
- C. S. Cox.** The survival of *Escherichia coli* sprayed into air and into nitrogen from distilled water and from solutions of protecting agents, as a function of relative humidity.
- M. Webb.** The utilization of magnesium by certain Gram-positive and Gram-negative bacteria.
- W. G. Murrell and W. J. Scott.** The heat resistance of bacterial spores at various water activities.
- A. E. Ritchie, R. F. Keeler and J. H. Bryner.** Anatomical features of *Vibrio fetus*: electron microscopic survey.
- R. F. Keeler, A. E. Ritchie, J. H. Bryner and J. Elmore.** The preparation and characterization of cell walls and the preparation of flagella of *Vibrio fetus*.

The subscription rate for 1966 is £5 net per volume of 3 parts, single parts 45s. each, plus postage. Four volumes will be issued each year. Orders should be sent to

Journal of CELL SCIENCE

Formerly The Quarterly Journal of Microscopical Science

The *Journal of Cell Science* is devoted to all aspects of the study of cells. The scope of the journal is wide, and papers dealing with the entire range of investigations of cell organization, including accounts of advances in the relevant techniques, will be acceptable. Thus, in addition to studies of the structure and functions of plant and animal cells and their extra-cellular products (for example, cell walls, cuticles), papers will be published on such topics as cell growth and division, cell movements and interactions, and cell genetics. Contributions concerned with aspects of morphogenesis at the cellular and subcellular levels will also be acceptable. Studies of the organization of micro-organisms will be welcomed, as will papers dealing with the study of viruses, in so far as they are relevant to an understanding of cell organization (for example, those dealing with cell virus interactions). Cytochemical papers will be acceptable, but histochemical work, in which the emphasis is on the localization of substances at the tissue level, will not ordinarily be included. Occasional review articles will be published.

Subscriptions: £8 per volume of 4 parts, post free; single parts 50s. postage extra. Copies may be ordered from your bookseller, or direct from the publishers:

THE CRABS OF SAGAMI BAY

Collected by His Majesty the Emperor of Japan

Edited by the Biological Laboratories, Imperial Household

Text by Dr Tune Sakai

A unique, carefully documented study by the Emperor of Japan, whose sixth book, *The Crabs of Sagami Bay*, presents notes on approximately 350 species of crabs, including five new species discovered by His Majesty.

Dr Tune Sakai, Professor of Biology at Yokohama National University, has assisted His Majesty in the collection of materials, as well as preparing the text for the present volume.

The 100 colorplates of singular beauty and authenticity add to the value of this important work. This book is especially recommended for oceanographers, marine biologists, and scholars of crustaceana, as well as libraries and private scientific collections. In English, with abbreviated Japanese text.

7 $\frac{1}{4}$ × 10 $\frac{1}{4}$ in.

Discovery Reports

The Discovery Reports contain the results of investigations in the Antarctic and other waters in the southern hemisphere undertaken by the Discovery Committee. Publication began in 1929 and the series has now reached Volume XXXIII. The Reports are published for the National Institute of Oceanography by Cambridge University Press and a detailed prospectus is available.

PERGAMON PUBLICATIONS for Marine Biologists

Seaweed Fourth Symposium

Edited by Ad. Davy-de-Virville, University of Paris and J. Feldman, Prof. of Marine Biology, Paris

This symposium, which covered the biology and ecology of algae, its chemistry and utilization, brought together scientists and representatives of the seaweed industry, to co-ordinate scientific studies for the exploitation of seaweed resources. In addition to contributions on the general composition, external conditions and special constituents of seaweed, subjects of special interest in medicine, microbiology, pharmacy, botany-cytology and morphology are included.

'The editors are to be congratulated on this work and Pergamon Press on the presentation of the book.'

The Biological Journal

430 pages £5. \$15.00

Biology of Suspension Feeding

C. Barker Jørgenson, University of Copenhagen

Mechanisms for extracting on a large scale small particles suspended in the surrounding water have been developed by numerous aquatic organisms—the suspension feeders. The first section of the book deals with the structure and functions of the feeding organs in the different suspension feeders; part 2 surveys the potential sources of food for the feeders; and part 3 discusses the three main habitats: coastal waters, the euphotic zone of oceanic waters and the deep sea.

356 pages 80s. \$12.50

Deep Sea Research and Oceanographic Abstracts

Edited by L. Fage, Institutet d'Océanographie, Paris, Mary Sears, Woods Hole Oceanographic Institution, Massachusetts, and Mary Swallow, National Institution of Oceanography, Surrey

This journal, which was created in 1954 at the instigation of the Joint Commission on Oceanography of the International Council of Scientific Unions, publishes papers on research connected with the problems of the ocean basin, and the geological and climatological history of the earth. Also included are titles of abstracts of papers and reports published throughout the world and frequent translations from the Russian journal *Okeanologiya*. Published Bimonthly.

Specimen copy and subscription rates available on request.
