

## Subscription rates

Subscription rates for volume **53** (2016) of *Journal of Applied Probability* (JAP) are as follows (post free and online access at <http://journals.cambridge.org/jpr>). For libraries and institutions: US\$344.00, £222.00 (online only); US\$378.00, £244.00 (online & print). For individuals, US\$130.00, £84.00 (online & print). The subscription rates for volume **48** (2016) of *Advances in Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: [subscriptions\\_newyork@cambridge.org](mailto:subscriptions_newyork@cambridge.org) in the Americas and [journals@cambridge.org](mailto:journals@cambridge.org) for the Rest of the World.

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignation of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address [submissions\\_japaap@sheffield.ac.uk](mailto:submissions_japaap@sheffield.ac.uk). All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021-9002/16

*Research Papers*

- 633 Z. I. BOTEV, A. RIDDER AND L. ROJAS-NANDAYAPA. Semiparametric cross entropy for rare-event simulation
- 650 ANTON MURATOV AND SERGEI ZUYEV. Bit flipping and time to recover
- 667 EVANGELOS KRANAKIS AND GENNADY SHAIKHET. Sensor allocation problems on the real line
- 688 FREDRIK OLSSON AND TATYANA S. TUROVA. Ergodicity of age-dependent inventory control systems
- 700 FRASER DALY. Compound geometric approximation under a failure rate constraint
- 715 GUANGXIN JIANG AND MICHAEL C. FU. Quantile sensitivity estimation for dependent sequences
- 733 ADRIEN HITZ AND ROBIN EVANS. One-component regular variation and graphical modeling of extremes
- 747 TAKIS KONSTANTOPOULOS, ZHENXIA LIU AND XIANGFENG YANG. Laplace transform asymptotics and large deviation principles for longest success runs in Bernoulli trials
- 765 GEROLD ALSMEYER AND ALEXANDER MARYNYCH. Renewal approximation for the absorption time of a decreasing Markov chain
- 783 ERIC FOXALL. The SEIS model, or, the contact process with a latent stage
- 802 JYY-I HONG. Coalescence on critical and subcritical multitype branching processes
- 818 ONNO BOXMA, MICHEL MANDJES AND JOSH REED. On a class of reflected AR(1) processes
- 833 CHRISTIAN HIRSCH. Bounded-hop percolation and wireless communication
- 846 ANDREA COLLEVECCHIO, ABBAS MEHRABIAN AND NICK WORMALD. Longest paths in random Apollonian networks and largest  $r$ -ary subtrees of random  $d$ -ary recursive trees
- 857 VYTAUTĖ PILIPAUSKAITĖ AND DONATAS SURGAILIS. Anisotropic scaling of the random grain model with application to network traffic
- 880 KATJA GABRYSCH. Distribution of the smallest visited point in a greedy walk on the line
- 888 BOJAN BASRAK AND DRAGO ŠPOLJARIĆ. On randomly spaced observations and continuous-time random walks
- 899 IRENE CRIMALDI. Central limit theorems for a hypergeometric randomly reinforced urn
- 914 ERIK THÖRNBLAD. The dominating colour of an infinite Pólya urn model

*Short Communications*

- 925 ACHILLEFS TZIOUFAS. The entirely coupled region of supercritical contact processes
- 930 MARK BROWN AND SHELDON M. ROSS. Optimality results for coupon collection
- 938 K. BRUCE ERICKSON. Uniqueness of the null solution to a nonlinear partial differential equation satisfied by the explosion probability of a branching diffusion
- 946 LOÏC HERVÉ AND JAMES LEDOUX. Computable bounds of an  $\ell^2$ -spectral gap for discrete Markov chains with band transition matrices
- 953 MARTIN MÖHLE AND MORIHIRO NOTOHARA. An extension of a convergence theorem for Markov chains arising in population genetics
