The only percutaneous device dressing proven to reduce the incidence of **CRBSI and local infections**¹

BIOPATCH Dressing is specifically designed to inhibit bacterial growth around all percutaneous devices, including catheters and orthopedic pins.

Powerful protection... Powerful proof.

- BIOPATCH Dressing provides protection against a broad spectrum of bacteria including resistant strains MRSA and VRE, as well as *Candida albicans*.
- In a controlled, randomized trial, use of BIOPATCH Dressing resulted in a reduction in the incidence of CRBSI and local infections as compared with standard care.¹

Clinical Infectious Diseases

Official publication of the Infectious
Diseases Society of America

Clinical Infectious Diseases (CID) publishes topical research and incisive commentaries from distinguished clinicians and scientists on the diagnosis and treatment of infectious diseases. Each issue contains clinically relevant articles of current interest in:

- Clinical research
- Immune mechanisms
- Medical microbiology
- Epidemiology and prevention
- Pathogenesis
- HIV/AIDS
- New antimicrobial therapies

- Rapid activity against gram-positive and gram-negative bacteria
- Persistent antimicrobial activity – prevents regrowth of microorganisms on the skin for at least 48 hours
- Unlike povidone-iodine, chlorhexidine (CHG) remains active in the presence of blood, serum, and other protein-rich biomaterials¹
- CHG has demonstrated a 50% reduction in the incidence of catheter-related bloodstream infections compared to povidone iodine¹
