Nutrition Research Reviews

Volume 27, 2014 ISSN: 0954-4224

Aims and Scope

Nutrition Research Reviews publishes comprehensive and challenging review articles on selected key topics in nutritional science. Authors are encouraged to take a critical approach in appraising the literature while also aiming to advance new concepts and hypotheses. The journal publishes both solicited and unsolicited articles.

Nutrition Research Reviews is published twice a year by Cambridge University Press on behalf of The Nutrition Society.

The contents page of this journal is available on the Internet before publication at www.cambridge.org/nrr

Editor-in-Chief

J V Woodside, *Belfast, UK*

Deputy Editor

Jos Houdijk, *Scottish Agricultural College, UK*

Editorial Board

M Ashwell, *Baldock, UK*

D A Bender, *London, UK*

N Binns, *Drogheda, Ireland*

J L Black, *Warrimoo, Australia*

D Dardevet, *Theix, France*

C Edwards, *Glasgow, UK*

J M Hibbert, *Atlanta, GA, USA*

T Hill, *Newcastle-upon-Tyne, UK*

J K Lodge, *Newcastle-upon-Tyne, UK*

H C Lukaski, *Grand Forks, ND, USA*

S McCann, *Buffalo, NY, USA*

M Pufulete, *Bristol, UK*

P Rogers, *Bristol, UK*

N W Solomons, *Guatemala City, Guatemala*

M Verstegen, *Wageningen, Netherlands*

C M Weaver, *West Lafayette, IN, USA*

K M Younger, *Dublin, Ireland*

The Nutrition Society has as its objective the advancement of the scientific study of nutrition and its applications to the maintenance of human and animal health.

Application of membership is invited from anyone whose work has contributed to the scientific knowledge of nutrition, whether such work has been in the laboratory, the field or the clinic, and whether experimental, clinical, agricultural or statistical in nature. There is also a student membership scheme with reduced subscriptions.

Particulars of The Nutrition Society and application forms for membership are available from The Nutrition Society, 10 Cambridge Court, 210 Shepherds Bush Road, London W6 7NJ, UK.

Tel: +44 (0)20 7602 0228, Fax: +44 (0)20 7602 1756, Email: office@nutsoc.org.uk

Publisher: Katy Christomanou

Nutrition Research Reviews is an international journal published biannually (June and December) by Cambridge University Press on behalf of the Nutrition Society.

Subscription information:

Volume 27 2014 (2 issues)
Internet/print package: £260/\$508 American only/€404 EU only
Internet only: £169/\$313 Americas only/€253 EU only

Back volumes are available. Please contact Cambridge University Press for further information.

Claims for non-receipt of journal issues will be considered on their merit and only if the claim is received within six months of publication. Replacement copies supplied after this date will be chargeable.

US POSTMASTERS: please send address corrections to *Nutrition Research Reviews*, Cambridge University Press, 100 Brook Hill Drive, West Nyack, New York 10994–2133.

Information for Authors: The journal publishes both solicited and unsolicited review articles. For unsolicited material, authors are asked to submit a summary of the article to the Editor-in-chief in the first instance:

Professor Jayne Woodside
Centre for Public Health
Queen's University Belfast
Institute of Clinical Science B
Grosvenor Road
Belfast, BT12 6BJ
UK
Tel: 44(0)2890632585
Fax: 44(0)2890235900
Email: j.woodside@qub.ac.uk

Directions to Contributors: are available from the Editor-in-chief.

Offprints: The author (or main author) of an accepted paper will receive a free PDF of their paper and a voucher copy of the issue in which their paper has been published. Additional offprints are available for a fee and should be ordered at proof stage. **No page charges are levied by this journal.**

Copyright: As of July 2000 the copyright of all articles submitted to *Nutrition Research Reviews* are retained by the authors or their institutions. For articles prior to this date permission for reproduction of any part of the journal (text, figures, tables or other matter) in any form (on paper, microfiche or electronically) should be sought directly from the Society, at: The Publications Office, The Nutrition Society, 10 Cambridge Court, 210 Shepherds Bush Road, London W6 7NJ, UK.

Disclaimer: The information contained herein, including any expression of opinion and any projection or forecast, has been obtained from or is based upon sources believed by us to be reliable, but is not guaranteed as to accuracy or completeness. The information is supplied without obligation and on the understanding that any person who acts upon it or otherwise changes his/her position in reliance thereon does so entirely at his/her own risk. Neither the Society nor Cambridge University Press accepts responsibility for any trade advertisement included in this publication.

This journal is printed on acid-free paper from renewable sources. Printed in the UK by Bell & Bain Ltd., Glasgow.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Autism and nutrition: the role of the gut–brain axis

Marijke M. H. van De Sande, Vincent J. van Buul & Fred J. P. H. Brouns

Introduction	199
Discussion	200
Gastrointestinal abnormalities	200
Microbiotic compositions: clostridia and vancomycin	200
Indolylacryloylglycine	201
Abnormal intestinal permeability	201
Metabolic abnormalities	202
Methylation, sulfation and oxidative stress	202
Glutamate, glutamine and other amino acids	202
Carbohydrate digestion and absorption	203
Intestinal inflammation	203
Food allergies	203
Nutritional interventions	204
Gluten- and milk protein-free diets	204
Dietary pre- and probiotic supplementation	207
Vitamin supplementation	208
Summarising considerations	209
Acknowledgements	210
References	210

Vitamin E–drug interactions: molecular basis and clinical relevance

Maren Podszun & Jan Frank

Introduction	215
Vitamin E	215
Nutrient–drug interactions	216
Potential interactions of vitamin E with drugs	217
<i>Ex vivo</i> inactivation of drugs	217
Vitamin E and pharmacokinetics	217
Pre-systemic transport and metabolism	217
Vitamin E and pre-systemic drug transport	217
Vitamin E and pre-systemic drug metabolism	222
Interactions of vitamin E with hepatic drug metabolism and excretion	222
Vitamin E and hepatic uptake of drugs	222
Vitamin E and hepatic phase I metabolism	223
Vitamin E and hepatic phase II metabolism	224
Vitamin E and hepatic drug export	224
Vitamin E and pharmacodynamics	224
Vitamin E and blood coagulation	224
Vitamin E and platelet adhesion, activation and aggregation	225
Vitamin E, vitamin K and the extrinsic and intrinsic coagulation pathways	226
Interactions of vitamin E of an unknown kind that alter drug efficacy	226
Vitamin E may impair tamoxifen drug activity in breast cancer patients	226
High-dose vitamin E supplementation may alter the pharmacokinetics of cyclosporine A	227
α -Tocopherol supplementation reverses the overexpression of the fatty acid translocase CD36	227
Conclusions	228
Acknowledgements	228
References	228

An evidence-based method for examining and reporting cognitive processes in nutrition research <i>Matthew P. Pase & Con Stough</i>	
Introduction	232
A brief review of research on human cognition	233
Carroll's cognitive framework and the three-stratum theory of cognitive abilities	234
Contemporary intelligence theory: Cattell–Horn–Carroll theory of cognitive abilities	234
Competing theories of human cognition and intelligence	235
From theory to practice: applying intelligence theory to clinical nutrition research	235
Example 1: grouping cognitive data from a single nutrition research study	236
A note on standardised computerised cognitive test batteries and the Cattell–Horn–Carroll model	236
Example 2: grouping cognitive tests from a collection of nutrition research clinical trials	237
Method for collecting articles	237
Results	238
Considerations for grouping cognitive test data into broader cognitive domains	238
Strengths of using the Cattell–Horn–Carroll or Carroll approach	239
What cognitive domains should future nutrition intervention studies investigate?	239
Limitations of using the Cattell–Horn–Carroll or Carroll approach	239
Conclusions	240
Acknowledgements	240
References	240
Twin studies advance the understanding of gene–environment interplay in human nutrigenomics <i>Tess Pallister, Tim D. Spector & Cristina Menni</i>	
Introduction	242
Heritability of food intake phenotypes: the usage of twins for heritability estimates of intakes	243
Heritability of energy and macronutrient intakes	243
Heritability of dietary patterns	244
Individual foods and food group heritabilities	244
Nutritional phenotype heritability conclusion	245
The importance of twins for emerging nutriomic research	245
Nutrimetabolomics	246
Microbiome	246
Epigenetics	247
Transcriptomics	247
Proteomics	248
Conclusion	248
Acknowledgements	248
Supplementary material	248
References	248
Biochemical markers for assessment of calcium economy and bone metabolism: application in clinical trials from pharmaceutical agents to nutritional products <i>Jean-Philippe Bonjour, Wendy Kohrt, Régis Levasseur, Michelle Warren, Susan Whiting & Marius Kraenzlin</i>	
Introduction	252
Osteoporosis, a major health problem	253
Therapeutic options and limitations	253
Evidence-based criteria in osteoporosis management	253
Concept of evidence-based nutrition in bone health and osteoporosis	253
Bone-related biomarkers: biochemical analyses and clinical application	254
Bone-related circulating hormonal factors	254
Hormonal changes to insufficient supply of calcium, vitamin D and protein	254
Biochemical determination of bone-trophic hormonal factors: parathyroid hormone	254
Biochemical determination of bone-trophic hormonal factors: 25-hydroxyvitamin D	254
Biochemical determination of bone-trophic hormonal factors: insulin-like growth factor-I	255
Bone turnover markers	255
Importance of bone remodelling in osteoporosis	255

Contents

Bone markers reflecting bone formation and bone resorption	256
Predictive value of early changes in bone markers in response to pharmaceutical agents on later effects on bone mineral density/content and fragility fractures: bone turnover markers and the rate of bone loss	257
Predictive value of early changes in bone markers in response to pharmaceutical agents on later effects on bone mineral density/content and fragility fractures: bone turnover markers and fracture risk	257
Bone turnover markers and treatment monitoring	258
Usefulness of biomarkers of bone turnover in clinical nutrition research	259
Influence of foods or nutrients on bone turnover markers	259
Postmenopausal women	259
Elderly individuals	259
Bone turnover markers in clinical research on eating disorders	259
Anorexia nervosa	260
Intensive exercise	260
Induced weight loss in overweight/obese subjects	261
Study designs to test the effects of food products on bone metabolism	261
Issues with randomised controlled trials in osteoporosis	261
Ethical consideration in randomised controlled trials and sample size	261
Surrogate endpoints for antifracture efficacy of new drugs	261
Short-duration randomised controlled trials in nutrition clinical research	262
The advantage of cross-over design in nutritional investigation	262
Comparative effectiveness research	262
Conclusions	262
Acknowledgements	263
References	263
Is there a role for vitamin C in preventing osteoporosis and fractures?	
A review of the potential underlying mechanisms and current epidemiological evidence	
<i>Henriette Finck, Andrew R. Hart, Amy Jennings & Ailsa A. Welch</i>	
Introduction	268
Bradford Hill criteria	269
Potential mechanisms of vitamin C in bone health	269
Osteoclastogenesis	269
Osteoblastogenesis	269
Bone collagen synthesis	270
Measures of vitamin C intake and status	270
Current evidence on vitamin C, osteoporosis and fracture prevention	271
Intervention studies	271
Prospective and longitudinal studies	271
Case-control studies	274
Cross-sectional studies	274
Moderate <i>v.</i> high vitamin C intakes	279
Discussion and conclusions	279

How to measure mood in nutrition research	
<i>Richard Hammersley, Marie Reid & Stephen L. Atkin</i>	
Introduction	284
Defining mood	285
Research on the effects of carbohydrates on transient mood	286
Causes of transient mood rating	287
Semantic priming of mood rating	287
Mood rating affects subsequent mood rating	288
Sensitisation and orientation	288
Analysis of mood ratings	288
Requirements of a transient mood-rating system	288

Are widely used rating systems fit for purpose?	289
Inherent biases in the rating process	290
Set-point biases	290
Biases due to the granularity of the scale	290
Biases due to the labelling of the scale	290
Biases due to the items available for rating	290
Towards a solution	290
Conclusions	291

Dietary fibre and the importance of the gut microbiota in feline nutrition: a review	
<i>Kristel Rochus, Geert P. J. Janssens & Myriam Hesta</i>	
Introduction	295
Bacterial populations in the gastrointestinal tract	296
Microbiota in the different regions of the feline gastrointestinal tract	296
Stomach	296
Small intestine microbiota: duodenum	297
Small intestine microbiota: jejunum and ileum	298
Large intestine and faeces	298
Effects of dietary fibre on the gastrointestinal microbiota	298
<i>In vitro</i> and <i>in vivo</i> fermentation studies	299
<i>In vitro</i> fermentation studies	300
<i>In vivo</i> studies	300
Effects of dietary fibre on nutrient intake, nutrient digestibility and faecal characteristics: viscous fibres	300
Effects of dietary fibre on nutrient intake, nutrient digestibility and faecal characteristics: fructans, mannanoligosaccharides, galacto-oligosaccharides and lactosucrose	301
Effects of dietary fibre on nutrient intake, nutrient digestibility and faecal characteristics: moderate (beet pulp) and less fermentable fibre sources	302
Effects of dietary fibre on nutrient intake, nutrient digestibility and faecal characteristics: animal fibre	303
Effects of dietary fibre on colonic morphology and function	303
Effects of dietary fibre on nitrogen and energy metabolism	303
Effects of dietary fibre on diseases with dietary protein restriction as a treatment cornerstone, such as chronic kidney and liver disease	304
Conclusions	304
Acknowledgements	304
References	304
Are intact peptides absorbed from the healthy gut in the adult human?	
<i>Warren M. Miner-Williams, Bruce R. Stevens & Paul J. Moughan</i>	
Introduction	308
Pathways for the absorption of macromolecules from the gastrointestinal tract	310
Evidence for the absorption of peptides from the healthy gut of adult humans	311
Early claims for oligopeptide absorption	311
Food-derived bioactive peptides	312
The lactotriptides isoleucine–proline–proline and valine–proline–proline	312
Other bioactive peptides present in milk	314
Opioid-acting peptides	316
Absorption of larger peptides	317
Oral delivery of pharmacologically active proteins and peptides	320
Absorption, distribution, metabolism and excretion	321
Conclusion	321
