

Subscription rates

Subscription rates for volume **55** (2018) of *Journal of Applied Probability (JAP)* are as follows (post free and online access at <http://cambridge.org/jpr>). For libraries and institutions: US\$381.00, £246.00 (online only); US\$418.00, £270.00 (online & print). For individuals, US\$144.00, £92.00 (online & print). The subscription rates for volume **50** (2018) of *Advances in Applied Probability*, the companion publication, are the same; for individual subscribers that order both journals at the same time, the combined price is discounted by 10%. Please send all subscription renewals and enquiries to: subscriptions_newyork@cambridge.org in the Americas and journals@cambridge.org for the Rest of the World.

Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability (JAP)* or *Advances in Applied Probability (AAP)*. Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Editor-in-Chief on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L^AT_EX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as portable document format (PDF) files, not exceeding 1 Mb, to the email address submissions_japaap@sheffield.ac.uk. All submissions will be acknowledged on receipt.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/18

Research Papers

- 1 DAVID CRIENS. Structure-preserving equivalent martingale measures for \mathcal{H} -SII models
- 15 ALEXANDER IKSANOV, WISSEM JEDIDI AND FETHI BOUZEFFOUR. Functional limit theorems for the number of busy servers in a $G/G/\infty$ queue
- 30 MICHAEL GRABCHAK. Domains of attraction for positive and discrete tempered stable distributions
- 43 M. FALK, A. KHORRAMI CHOKAMI AND S. A. PADOAN. On multivariate records from random vectors with independent components
- 54 MARCO OESTING. Equivalent representations of max-stable processes via ℓ^p -norms
- 69 CHRISTOPHE PROFETA. A remark on positive sojourn times of symmetric processes
- 82 FABIAN KÜCK AND DOMINIC SCHUHMACHER. On the age of a randomly picked individual in a linear birth-and-death process
- 94 ANTONIO DI CRESCENZO AND ALESSANDRA MEOLI. On a jump-telegraph process driven by an alternating fractional Poisson process
- 112 MATHEW D. PENROSE. Inhomogeneous random graphs, isolated vertices, and Poisson approximation
- 137 JOSE BLANCHET AND KARTHYEK MURTHY. Exact simulation of multidimensional reflected Brownian motion
- 157 XIAOOU LI AND GONGJUN XU. Uniformly efficient simulation for extremes of Gaussian random fields
- 179 AYAN BHATTACHARYA AND PARTHANIL ROY. A large sample test for the length of memory of stationary symmetric stable random fields via nonsingular \mathbb{Z}^d -actions
- 196 NATHAKHUN WIROONSRI. Stein's method for negatively associated random variables with applications to second-order stationary random fields
- 216 NARAYANASWAMY BALAKRISHNAN, GHOBAD BARMALZAN AND ABEDIN HAIDARI. On stochastic comparisons of k -out-of- n systems with Weibull components
- 233 F. G. BADÍA, C. SANGÜESA AND JI HWAN CHA. Univariate and multivariate stochastic comparisons and ageing properties of the generalized Pólya process
- 254 NABIL LASMAR, CÉCILE MAILLER AND OLFA SELMI. Multiple drawing multi-colour urns by stochastic approximation
- 282 ANGELOS DASSIOS AND JIA WEI LIM. Recursive formula for the double-barrier Parisian stopping time
- 302 BIN LI, GORDON E. WILLMOT AND JEFF T.Y. WONG. A temporal approach to the Parisian risk model

Short Communications

- 318 MAHER NOUIEHED AND SHELDON M. ROSS. A conjecture on the Feldman bandit problem
