

software available from Penn State. Thirty nine programs are listed.

In setting up the register, the AXAA makes no guarantees about the operation of the programs. Any comments or notes on specific programs are made simply to aid their installation and use. The register does not set out to make critical appraisal of any program, but leaves that to the user. Nevertheless, feedback from users on any operational details will be included for the assistance of other users, and users are encouraged to relay their comments and suggestions to authors.

Programs of which the AXAA has copies will be made available on request on a "costs" basis ... that is, the user will be expected to either provide or pay the cost of the medium, postage etc. Programs will generally be available on PC medium, 5.25" high density diskettes. Some programs are available on TK50 cartridge tape for VAX applications. Where the AXAA does not maintain copies of the programs, the register will indicate contacts where they can be obtained. Where possible, any imported media will be checked to the best of their ability to ensure it is "virus" free. However, AXAA will not guarantee diskettes or programs to be "virus-free".

If the diskette is of interest, Alan suggests arrangements for exchange of information on a regular basis in the future might be in order.

A "Tracker" for your Laboratory

Runway announces **LabTrack!**, a new software package for managing jobs in a laboratory. Running on solo PC's or in networks, **LabTrack!** even predicts when a job is likely to be finished!

LabTrack! provides valuable management information. Standard reports provide instant access to job history (also used for billing a completed job), present job status, and projected work loads at stations throughout the lab. **LabTrack!** helps manage the lab's work load for better reliability and lower costs.

Straightforward design and on-screen prompts make **LabTrack!** easy for staff members to learn. Only a brief system manual is needed to help with initial setup.

In small labs, **LabTrack!** can run on one stand-alone PC with hard disk and printer. **LabTrack!** can also serve many users throughout a very large lab, running on multi-user Xenix™ systems or Novell™ networks.

Developed in conjunction with a major analytical and failure analysis lab, **LabTrack!** can be customized to each customer's unique lab environment. Installation and setup options allow flexibility.

LabTrack! is priced at \$495.00. Orders may be placed with Runway, 5301 Beethoven Street, Suite 102, Los Angeles, CA 90066. Telephone (213)827-8935, FAX (213)822-1978.

LabTrack! is a member of the **TrackStar!** family of products for keeping track of files, capital assets, high-value inventory, work-in-process, job costs, etc. **TrackStar!** products keep detailed account of anything you need to track. They also build a historical database - vital for estimation and performance measurement! **TrackStar!** products are tools for managing business.
