

infrastructure, the US and its partners should put pride aside, joining OBOR in order to “shape it from within” (p. 240). Country specialists might well quibble with some of Freymann’s details: within Sri Lanka there was from the start a great deal of domestic controversy over the profoundly political and patronage-based Hambantota port. One might wonder whether Freymann’s choice of focus on highly capital-intensive ports relatively isolated from local societies leads him to a slanted view of the OBOR infrastructural juggernaut. Certainly, there is a wealth of ethnographic work that suggests that Chinese actors run into no end of trouble in Africa and Latin America, when roads, dams, power plants and mines are much more visibly present to local populations, often upsetting customary land-use rights or leading to environmental protests.

Despite these quibbles, Freymann has written an ambitious and accessible book with wonderful detail, clear arguments and a novel policy recommendation that will cause much thinking in policy circles. Taken together, Ye and Freymann bookend much of the current thinking on China’s BRI and both will find well-deserved places on the syllabi of all courses that cover the subject.

There is a debate as to whether Donald Trump’s decision in 2018 to withdraw the US from the Joint Comprehensive Plan of Action (JOCPA) actually managed to delay Iran’s race toward developing nuclear weapons. Yet, there is more agreement among policy watchers that his move wreaked havoc on the Iranian economy. Much of this fairly persuasive and well-written book is dedicated to the ways and means China positioned itself to become an indispensable trade partner for the Islamic Republic before and after Trump’s decision. Drawing mainly on Western sources, as well as a valuable spattering of Farsi and Chinese ones, Azad offers seven more-or-less thematically constructed chapters, starting in 2005 when the Iranian nuclear programme became a “hot button” issue of international politics.

Chapter one sets the stage for Iran’s predicament before and after JOCPA. In chapter two, the author focuses on major changes to the Sino-Iranian crude oil trade, arguing that China continued to import oil from Iran despite the sanctions including through subterranean methods. Chapter three is broadly about banking arrangement between China and Iran, where the author describes Chinese performance as mixed. In chapter four, Azad shows Chinese investment in Iran in recent years has been diminishing. On the other hand, in chapter five he shows an uptick in technological transfers from China to Iran in some sectors. Chapter six explores the increasing role of Chinese automakers in Iran in recent years but argues that many critics of that role remain in Iran. In chapter seven, the author finally argues that Iran’s non-oil exports to China have remained modest.

In 2018, Trump’s unilateral decision was rebuked by even the UK and Japan. It was tipped that as a result Sino-Iranian relations would get “turbocharged,” but as Azad shows these relations in effect

became “lopsided” (p. 8). So, despite the 25-year strategic agreement signed between Beijing and Tehran in 2021, there was alarm in some quarters in Iran about growing dependence on Chinese auto parts (pp. 31, 34). The JOCPA era for example saw a diminished presence of the Chinese car industry in Iran, but that changed during the Trump era (p. 10). This was not least because Iran’s purchasing power had dropped significantly during the Trump era, as Azad notes.

What needs to be stressed to readers more robustly is that when JCPOA was signed in July 2015 it had a dramatic positive effect on the oil trade between Tehran and Beijing. Here (p. 19), it would have been beneficial to mention the “Asianization” literature that explains how East Asia as a whole has become reliant on Middle East – including Iranian – oil.

However, China is less vulnerable (p. 20) than Iran because it can import large quantities of oil from Saudi Arabia, Angola and when need be – or when prices are down – from Russia too. On the other hand, in 2021 almost 26 per cent of Iranian oil ended up in Chinese ports (p. 25). This is why perhaps bartering Iranian crude oil for Chinese commodities has become very important in recent years (p. 31).

Circumnavigating sanctions by Iran has also become important, for example by selling steel to China through a third country, wiring the proceeds to a bank account registered in China and then transferring the accumulated funds to Iran using “intermediaries” outside China (p. 47). The Chinese Bank of Kunlun has become notorious for such transfers. More broadly, China and Iran have varying degrees of interest in pushing back against the “bully” (*sic*) US dollar (pp. 54, 57). In this context, John Kerry went as far as declaring the US dollar would cease to be world currency if the US walked away from JCPOA.

As Azad notes, the Chinese have been investing in Iran cautiously, the 25-year agreement notwithstanding. Xi’s Belt and Road Initiative announced in 2013 accelerated Chinese investment in Iran on paper; investment was then materially boosted only by announcement of the JCPOA in 2015 (pp. 69–70). The total value of Chinese investment contracts with Iran then plummeted from US\$3.1 billion in 2019 to only US\$57 million in 2021 (p. 72).

At present, as the author argues, the Chinese are waiting for a major breakthrough in the multi-lateral nuclear negotiations with Iran before they resume large scale investment (p. 75). What is worth remembering here is that Jiang Zemin back in 1997 had given up Chinese assistance to Iran’s nuclear programme in return for improved ties with the US (p. 85). Earlier, in 1991 the Chinese had quietly provided the Iranians 1.8 tons of uranium ore (p. 87). Yet, American pressure on China to constrict its dealing with Iran increased in the Trump era, with sanctions on ZTE and Huawei a particular case in point.

Despite the ban on Iranian oil exports during the Trump era, Azad argues that imports of Chinese auto parts, mobile phones and home appliances rose due to their affordability (p. 96). Indeed, during the Trump era, the Iranian car industry morphed into a “Chinese garage”, even though Chinese automakers had only 15 years of operational history in the region (p. 104). To be sure, many Western, Japanese and Korean brands left the Iranian car market altogether.

When the JOCPA was signed Chinese cars proved very unpopular. But as the author notes, the stringent sanctions later touched off joint ventures between Iranian and Chinese automakers (p. 110). The decision to buy Chinese-made, semi-Iranian-built cars in the Iranian market was driven by the high price of Western alternatives like Peugeot (p. 115), and also by the fact that Chinese models offered availability of spare parts despite the sanctions, as well as post-sale service. On the other hand, as Azad shows, some vocal critics of Chinese cars in Iran blamed them for a low quality that was resulting in high road-accident death tolls (pp. 116–117).

If the Trump sanctions resulted in increased Chinese exports to Iran (e.g. mobile phones, cars, house appliances), fewer non-oil Iranian products (e.g. carpets, dried fruit) were now sold to China (p. 130), the author argues. In that sense, the Chinese have a leg up over their Iranian trade partners.

In summary, this volume makes for a coherent analysis of the political economy of China–Iran relations over the last few years. This is based on interesting though fairly rudimentary data.

The volume will likely interest academics and students. It is a solid contribution to the literature on China's relations with the Middle East.

This edited volume, with a focus on the Chinese in Papua New Guinea (PNG), provides a new lens for readers to understand the PNG history and its relations with China. It dispels the misperceptions of Chinese in PNG as “a single homogenous group” and “the PNG's colonial history as just a black [Papua New Guinean] and white [Australian] experience” (pp. 19, 2). Instead, it demonstrates clearly the multifaceted involvement and experience of Chinese in PNG's social relations, economic development and local politics across different time periods.

Building on the authors' expertise in areas such as anthropology, international relations and linguistics, much of the research in the book is pioneering, whether it be about the history of Chinese in the Sepik region, political activism of New Guinea Chinese and the impact on Australia's immigration policy changes, Chinese dominance of the beche-de-mer market in PNG, or Chinese–local work relations at Basamuk nickel refinery and the workplace pidgins. In this sense, the book can be a useful reference for researchers from universities, government agencies, think-tanks, international and regional organizations and the general public who are interested in learning more about China and the Pacific region.

In addition to filling a gap in the literature about the Chinese in PNG's history, the book sheds light on the contemporary PNG–China relationship. This is significant as PNG is caught in the geostrategic rivalry between China and traditional powers such as Australia and the United States.

First, China has made headway in bolstering its relations with PNG, but challenges are growing. Beijing has worked hard to mobilize its diaspora to support China's diplomacy. James Chin (chapter four) argues that “the mainland Chinese has become a dominant economic and political force in PNG” after Australia (p. 87), predicting that China will be PNG's closer political partner while Australia remains more influential culturally. Anna Hayes (chapter nine) analyses the challenges to the Belt and Road Initiative (BRI) in PNG, such as the customary landownership, local perceptions of Chinese “sub-optimal aid” and lack of transparency. She cautions that China via BRI is drawing PNG “into its attempts to displace the US, the liberal world order, and to greatly disrupt the balance of the Pacific” (p. 227) and “it is still uncertain how [PNG's] non-alignment could work or if it is possible” (p. 228). PNG's agency and ability to balance its relations with major powers will be further tested as the geostrategic competition intensifies.

Second, negative perceptions about the Chinese community and China are notable among some groups in the Pacific. Shaun Gessler (chapter seven) reveals the clash of values between local female fish and vegetable sellers and male Chinese expatriate workers at a local market near the Basamuk
