

Dairy India 1992

4TH ANNUAL EDITION

Completely revised and enlarged, the new edition of the *Dairy India Yearbook* presents an in-depth profile of the emerging dairy scenario and provides a sweep of technical and economic information, supported by over 30 articles by specialists on diverse topics and over 120 tables, graphs and charts -- all key facts on finger tips and an update on emerging trends and market prospects.

Encyclopaedic in scope and coverage, the *Yearbook* serves as Databook-cum-Management Guide-cum-Directory-cum-Buyer's Guide and Who's Who of over 7,000 organizations and specialists classified in 25 listings. It is widely consulted for locating new markets and sources of supply of inputs and services for profitable commercial milk production and processing. Further, by identifying new investment opportunities and helping optimum utilization of existing resources, this compilation encourages individual enterprise and institutional initiative. A new genre in extension literature, this reference compendium is a must for anyone wishing to obtain first hand and upto-date knowledge of India's dairy industry.

DIRECTIONS TO CONTRIBUTORS

NOTE

Full Directions to Contributors, of which this is a summary, appear in the first (February) issue of each volume.

GENERAL

The *Journal of Dairy Research* publishes reports on all aspects of dairy science from any country. Material for publication should be sent to the Editor: Dr B. A. Rolfs, AFRC Institute of Food Research, Earley Gate, Whiteknights Road, Reading RG6 2EF, UK. Receipt of all material will be acknowledged. Submission of a paper will be taken to imply that it reports original unpublished work, that it is not under consideration elsewhere, and that if accepted by the *Journal* it will not be published elsewhere in any language without the consent of the Editors. Authors of accepted articles will be asked to assign their copyright, under certain conditions, to the *Journal*.

FORM OF PAPERS

Papers should be written in English using the spelling of the *Concise Oxford Dictionary* and should as far as possible be comprehensible to the non-specialist reader. They should be concise, but without omitting necessary material, and contain sufficient detail to allow repetition of the work.

Papers should be typed with wide margins on one side of A4 or quarto paper, double spaced throughout including References, Figure legends and Table headings and footnotes. Submit a top copy and two good copies (photocopies or carbon), packed flat. A single copy may be accepted from outside Europe.

Authors should consult a recent issue of the *Journal of Dairy Research* to familiarize themselves with Journal conventions and layout. Attention to these and other details will speed publication.

LAYOUT OF PAPERS

The paper should generally be divided as follows. (a) *Cover sheet* with the title of the article, names of authors each with one forename, together with their affiliations, a shortened version of the title suitable as a heading, and the name and address for correspondence. (b) A brief *Summary* should encapsulate the whole paper, showing clearly the new knowledge acquired. (c) The introduction, without heading, should not contain a full literature review, but should indicate why the subject of enquiry is interesting or important, and why the authors have chosen the approach described. (d) The *Experimental or Materials and Methods* section should contain adequate descriptions of procedures or appropriate references; sources of all materials (including address, with post code) and sources or strains of animals, microorganisms and so on should be indicated. (e) *Results* should be as concise as possible, without repetition or inclusion of irrelevant material. Tables and illustrations should be used efficiently (f) The *Discussion* should not repeat the results but discuss their significance. Any acknowledgements are given in a separate paragraph without heading. It is the responsibility of the authors to ensure that individuals or organizations acknowledged as providing materials or otherwise are willing to be identified. (g) *References*. Note. For some types of paper, other divisions may be preferable.

REFERENCES

References should be given in the text as Brown & Jones (1987) or (Schmidt, 1985; Nakamura *et al.* 1989); the first author with *et al.* is used for papers with three or more authors. Where necessary, papers are distinguished as

Lenoir (1988*a*), (Litov *et al.* 1990*a, b*). When several references appear together in the text, cite them in chronological order, and alphabetically within years. The Reference list at the end of the paper, which should begin on a fresh page, is given in strict alphabetical order. Authors should refer to a recent issue for the format of references.

TABLES

Tables should be numbered and carry headings enabling them to be understood without reference to the text. Each Table should be typed on a separate sheet, but their approximate position in the text should be indicated. Symbols for footnotes should be in the order †, ‡, §, ||, ¶, ††, etc. The use of *, **, etc. should be limited to indicating levels of significance.

ILLUSTRATIONS

Line drawings and photographs, which must be originals, should be numbered as Figures in Arabic numerals. Drawings should each be on a separate sheet, not larger overall than those on which the paper is typed, and packed flat. Curves or lines should not extend beyond the experimental points, which should be indicated, symbols used being, in order: ○, ●, △, ▲, □, ■, ×, +. Attached to each Figure should be a translucent flyleaf on which should be indicated clearly: title of paper and authors, Figure number, all numerals and lettering intended to appear on the final illustration, in the correct positions relative to the drawing underneath. There should be no letters or numerals on the drawing or photograph itself. Each Figure should be provided with a legend such that with the Figure it is comprehensible without reference to the text. Figure legends should be typed on a separate sheet or sheets.

Photographs should be glossy black and white prints accompanied by a legend as above. Scale bars on the photograph are preferable to magnifications in the legend. Only one copy of each illustration is required, but authors should ensure that photocopies provided with the other copies of the paper are of adequate quality to allow referees to judge their value.

STATISTICAL TREATMENT

Individual results should not normally be given. The methods of statistical analysis should be clearly described; a suitable reference is adequate. Authors should make it clear whether they are quoting (e.g.) SD, or SE. Any statement that two groups of values are different should be supported by the level of significance involved, as a single or range of *P* value: (*P* = 0.008) or (*P* < 0.01). Differences should not be claimed or implied if *P* > 0.05.

ETHICS OF EXPERIMENTS

Authors are expected to adhere to the relevant codes covering human subjects and the use of animals.

PROOFS

Authors will be advised when to expect proofs, which should be returned without delay to Mrs B. Gillian Day, AFRC Institute of Food Research, Earley Gate, Whiteknights Road, Reading RG6 2EF, UK. Proofs are sent for the correction of any printer's or editorial errors, not for addition of new material or revision of the text. Excessive alteration may have to be disallowed or made at the authors' expense, and may delay publication. Order forms for offprints are sent with proofs and should be returned directly to The University Press, Cambridge.

Continued from back cover

Characterization of the 12% trichloroacetic acid-insoluble oligopeptides of
Parmigiano-Reggiano cheese

F. ADDEO, L. CHIANESE, A. SALZANO, R. SACCHI, U. CAPPUCCIO, P. FERRANTI
and A. MALORNI

401–411

Texture and microstructure of chhana and rasogolla made from cows' milk

A. K. ADHIKARI, OM N. MATHUR and G. R. PATIL

413–424

Short communications

Identification of a new molecular form of human α -lactalbumin

F. MAYNARD

425–429

Comparison between the EC plate count test at 21 °C and an accelerated plate
count method for assessing the keeping quality of pasteurized milk

S. A. LANGFORD and R. G. KROLL

431–436

CONTENTS

Original articles	pages
Milking of cows in late pregnancy: milk production during this period and during the succeeding lactation B. RÉMOND, A. OLLIER and G. MIRANDA	233-241
Separate and additive stimulation of bovine milk yield by the local and systemic galactopoietic stimuli of frequent milking and growth hormone C. H. KNIGHT, J. E. HILLERTON, M. A. KERR, R. M. TEVERSON, A. TURVEY and C. J. WILDE	243-252
Computer simulation of the hydraulic milking method M. C. BUTLER and R. J. GRINDAL	253-264
Machine-induced teat tissue reactions and infection risk in a dairy herd free from contagious mastitis pathogens A. ZECCONI, J. HAMANN, V. BRONZO and G. RUFFO	265-271
Isolation and characterization of α_2 -macroglobulin from mastitis milk L. K. RANTAMÄKI and H.-P. MÜLLER	273-285
Collection of fore and hind milk from the sow and the changes in milk composition during suckling C. S. ATWOOD and P. E. HARTMANN	287-298
New α_2 -casein variant from caprine milk L. CHIANESE, R. MAURIELLO, N. INTORCIA, L. MOIO and F. ADDEO	299-305
Moisture sorption behaviour of mineral acid, lactic and rennet caseins in the temperature range 27-80 °C L. M. DIAMANTE, P. A. MUNRO and M. G. WEEKS	307-319
Changes in structure of the bovine milk fat globule membrane on heating whole milk A. V. HOULIHAN, P. A. GODDARD, B. J. KITCHEN and C. J. MASTERS	321-329
Effect of calcium on the stability of mares' milk lysozyme R. L. J. LYSTER	331-338
K ⁺ and Cl ⁻ transport by mammary secretory cell apical membrane vesicles isolated from milk D. B. SHENNAN	339-348
Different bacteriophage resistance mechanisms in <i>Streptococcus salivarius</i> subsp. <i>thermophilus</i> D. LARBI, B. DECARIS and J.-M. SIMONET	349-357
Intracellular pH and the role of D-lactate dehydrogenase in the production of metabolic end products by <i>Leuconostoc lactis</i> R. J. FITZGERALD, S. DOONAN, L. L. MCKAY and T. M. COGAN	359-367
Factors in ruminant colostrum that influence cell growth and murine IgE antibody responses D. L. WATSON, G. L. FRANCIS and F. J. BALLARD	369-380
Adherence of psychrotrophic bacteria to dairy equipment surfaces B. SUÁREZ, C. M. FERREIRÓS and M.-T. CRIADO	381-388
Accelerated cheese ripening: use of Lac ⁻ mutants of lactococci S.-E. BIRKELAND, R. K. ABRAHAMSEN and T. LANGSRUD	389-400
