**In 1867,
four renegades
founded a journal.**

Of the four men who left the Museum of Comparative Zoology in Cambridge to found **The American Naturalist**, two also participated in the founding, sixteen years later, of the American Society of Naturalists. The Society and the journal have worked closely together ever since, furthering the advancement and diffusion of knowledge about organic evolution and other broad biological principles.

**In 1983, AN is still at the
forefront.**

One of the oldest scientific periodicals in the United States, **The American Naturalist** is also one of the foremost publications in the world for research in ecology, evolution, and population biology. Drawing upon examinations of all biotic kingdoms, the **Naturalist** emphasizes sophisticated analyses, innovative theoretical syntheses, and empirical discoveries with broad general implications.
