## Call for papers – Special issue of *Journal of Plasma Physics*

Dear Colleagues,

*The Journal of Plasma Physics* is under new management and the new editorial team is embarking on a series of initiatives to stimulate broad diffusion of leading research in all areas involving plasma physics, focusing especially on the understanding of this field as a fundamental discipline.

As part of this effort, we would like to call your attention to a Special Issue of *JPP* edited by us and entitled: ***Present achievements and new frontiers in space plasmas***.

The issue is open to any contribution based on the most recent achievements and progress in ***Space Plasma Physics***. We invite you to submit a paper within one of the following main themes:

- *Basic models and fundamental processes in space plasmas*
- *Simulation of space plasmas: from fluid to kinetic models*
- *Fundamental plasma processes in space weather*
- *Recent achievements of space missions and future projects*

Papers may be regular research papers or in the style of a review. We also particularly encourage papers proposing new concepts for future space missions, as they will be fundamental in making further progress in this field.

We propose a submission deadline of **June 1, 2014** and plan to have the articles published before the end of the year.

Please feel free to circulate this announcement to others who might be interested.

Best Regards,

Francesco Califano and Thierry Passot, Associate Editors, JPP
